Volume 9 No. 27 Washington 25, D. C. July 7, 1961

GRAIN MARKETS TREND UPWARD

Cash grain prices followed a rising trend during the holiday-shortened week ended July 6. Flaxseed led the upswing with another very sharp advance, but most other grains registered fairly moderate gains too. Weather remained a major factor in the market.

Winter wheat was unchanged to 2¢ higher except for sharp advances for the high protein wheat at Kansas City where gains of as much as 8¢ were reported. Demand was broad with all classes of buyers competing for the small offerings. Disturbing drought losses in spring wheat was a strengthening factor in the winter wheat market. Spring wheat gained 2¢ at Minneapolis with a fairly good demand and the continued reports of drought damage. Durum wheat gained 5¢ with extremely light offerings. White wheat held firm at Portland reflecting scarce supplies and poor prospects for 1961 production. Rye went up 7¢ at Minneapolis in light trading.

Corn markets strengthened with a good demand for light offerings and prices gained 1-5¢ per bushel. Ideal weather for corn pushed rapid development of the new crop in the Corn Belt States. Oats strengthened at Chicago and Kansas City but dropped 1¢ at Minneapolis. Feed barley was unchanged at most markets but malting types advanced 5-8¢ with increased demand resulting from poor crop prospects. Grain sorghums were steady with supplies light.

Soybeans gained 6-11¢ with prospects for increased exports and slightly higher meal and oil markets. Warm weather speeded growth of the new crop but current offerings continue light. Flaxseed prices gained 35¢ as crop prospects continued to deteriorate. At Minneapolis, No. 1 flaxseed closed at \$3.95 -- just \$1.00 above the same date last year.

^{1/} Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

^{2/} Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

^{3/} Applies only to the varieties Baart and Bluestem of the sub-class Hard White.

^{4/} The monthly average price is the simple average of the daily closing prices.

1/ Carlot receipts have been converted to bushels on the basis that 1 carlot equals 1,800 bushels.

2/ Of the May receipts all were yellow soybeans. Inspections of soybeans in May included 3,993,000 bushels as cargo lots, 1,309,000 bushels as truck receipts, and the balance as carlot receipts.

-----Based on reports of inspections by licensed grain inspectors at all markets.-----

Grains: Carlot, cargo and trucklot inspected receipts, May 1961 with comparisons

1/ July 1, 1960 - June 30, 1961 for wheat, rye, oats, barley and flaxseed; October 1, 1960 - June 30, 1961, for corn, grain sorghums, and soybeans.

2/ For unrestricted domestic use except soybeans which are sold for domestic or export use at announced prices.

3/ Sales under Payment-In-Kind Program; not applicable to soybeans and flaxseed.

4/ Less than 500 bushels.

* Does not include 926,021 bushels of corn, 296,931 bushels of oats, 1,040,999 bushels of barley, and 1,945,707 cwt. of grain sorghums sold under Livestock Feed Program.

MARKETS MIXED INFLUENCED BY VARYING CROP PROSPECTS

Cash grain markets showed a mixed trend during the week ended July 13 influenced by crop reports. Durum wheat prices jumped over 50¢ while rye, soybeans and flaxseed lost around 10¢ per bushel. Feed grains and wheat were relatively unchanged from a week ago.

Winter wheat was about unchanged at Kansas City but declined 1-3¢ per bushel at Ft. Worth and Chicago. Demand was generally good from both exporters and domestic outlets. Weakness in Texas was attributed to large crop offerings while the Soft Red wheat market weakened with substantial arrivals of the new crop. Spring wheat gained 1-3¢ at Minneapolis reflecting smaller offerings and prospects for the smallest crop since 1936. The short durum crop boosted demands by mills and exporters and prices gained over 50¢ during the week. White wheat trended upward in the Pacific Northwest with small offerings. Rye lost 11¢ per bushel on reports of a larger-than-expected crop. Weakness was also attributed to announcement that CCC would stop sales of their stock for export.

Corn markets continued strong with good export demand and continued light offerings. The lowered crop prospects was a strengthening factor. Prices were 1-3¢ higher. Good inquiry for oats raised prices 1¢ per bushel while barley markets were barely steady on the West Coast and at Kansas City. But at Minneapolis, prices advanced 2-14¢ with excellent demand for better malting types. Grain sorghums gained 6-7¢ per cwt. reflecting good demand by feed mills and light offerings.

Soybeans dropped 11-14¢ with reports of record acreage and near ideal growing conditions in the main producing areas. Export demand was light. Flaxseed fluctuated in a nervous pattern during the week with higher bids about midweek, but closing 10¢ per bushel below a week ago.

CROP PROSPECTS ... as of July 1 indicate total planted and harvested acreages of crops for 1961 will be down from 1960. Diversion of corn and grain sorghum acreages under the Feed Grain Program took considerable land out of production. Impending shortages of irrigation water in the West and flooded lowlands along the Mississippi and Ohio River valleys also kept some acreage out of production. However, high indicated yields for most major crops will tend to lessen the effect of reduced acreage, according to the Crop Reporting Board. Production of corn for grain, forecast on this basis for the first time, is expected to be 3.2 billion bushels -- 18 percent less than in 1960. Winter wheat production is forecast at 1 billion 116 million bushels -- 1 percent more than last year and second largest crop of record. Spring wheat production of 126 million bushels is the smallest since 1936 and durum wheat prospects of 16.5 million bushels are the smallest since 1954 due to drouth and hot weather. Indicated oats production of 961 million bushels is 16 percent below 1960. Sorghum acreage for all purposes is estimated at 13.9 million acres -- 26 percent less than last year. Soybean acreage for beans is forecast at a record 27.1 million acres -- 15 percent more than 1960 and 13 percent more than the previous 1958 record.

EXPORTS OF WHEAT ... grain only, totaled a record 566 million bushels during the 1960-61 season on the basis of inspections for export. Flour exports are expected to total around 100 million bushels in grain equivalent. Inspections for export compare with 413 million for 1959-60 and the previous record in 1956-57 of 473 million bushels. Of the 1960-61 wheat exports, 348 million were Hard Red Winter, 25 million Hard Red Spring, 133 million White, 52 million Soft Red, 5 million Durum and a little over 2 million mixed. Again India was our biggest customer for wheat taking over 123 million bushels of which 77 million were Hard Red Winter and 46 million White. Pakistan imported 47 million from this country of which 23 million were Hard Red Winter and 14 million White. This country shipped nearly 41 million to Poland of which 26 million were Hard Red Winter and the balance Soft Red or White. Italy imported nearly 46 million bushels the bulk of which was Hard Red Winter. Of the nearly 34 million bushels exported to Spain 20 million were Hard Red Winter and the balance Soft Red or Soft White wheat. Nearly 36 million bushels of Hard Red Winter wheat were shipped to Brazil last season. (For details see pages 10-13).

RYE IMPORT QUOTA FOR 1960-61 ... expired June 30, 1961. Hearings by the Tariff Commission, to determine whether quotas were to be continued, were scheduled for July 11. At the request of the Secretary of Agriculture these hearings were postponed until further notice to determine whether the drouth in the United States and Canadian rye-producing areas is sufficient to remove the need for continuing the rye-import quota.

PRICE SUPPORT ELIGIBILITY FOR 1961-CROP BARLEY ... has been broadened to include grade No. 5 barley or grade No. 5 garlicky barley.. This will provide greater price protection to producers for this year's barley crop, which in some areas is of generally lower quality because of adverse weather conditions.

Cash grain closing prices compared with support price at principal terminals ^{1/}
 All prices rounded to nearest cent per bushel except grain sorghums per cwt.

^{1/} Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

^{2/} Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

^{3/} Applies only to the varieties Baart and Bluestem of the sub-class Hard White.

^{4/} The monthly average price is the simple average of the daily closing prices.

Based on weekly reports of inspections for export by licensed grain inspectors and does not include rail or truck movement to Canada or Mexico. In some cases, the ultimate destination of the grain exported is not shown on the inspection reports. Therefore, the quantity for each country may vary from official Census data which are based on custom declarations.

DURUM WHEAT DOWN SHARPLY - OTHER WHEAT MIXED

Cash grain markets were featured by the sharp reaction of durum wheat during the week ended July 20. Advancing winter wheat markets were offset by lower spring wheat prices influenced in part by rains over much of North Dakota. Feed grains and oilseeds were about unchanged from a week ago.

Hard winter wheat advanced 2-3¢ per bushel at Kansas City and Ft. Worth with good domestic and export demand and generally light offerings. Soft winter wheat advanced 6-8¢ at Chicago and St. Louis with light supplies for the improved demand. Flour business was slow in the spring wheat market and prices dropped 3¢. Demand improved at the lower level with substantial buying on a to-arrive basis. As exporters backed away from the rapidly advancing durum market, prices dropped sharply each day closing nearly 45¢ per bushel below a week earlier. White wheat gained 4¢ per bushel in the Pacific Northwest due to lack of producer selling. Rye strengthened earlier in the week but closed unchanged with reports that the crop, while small, will be adequate.

Corn markets were about unchanged with midwest rains and sunshine favorable for the new crop. The Commodity Credit Corporation was the major source of supplies with a steady domestic and export demand absorbing all offerings. The oats market was steady with the drought the major factor. Feeding barley closed at last week's level while malting barley continued to advance with a gain of 5¢ during the week. Grain sorghums gained 3-5¢ per cwt. at Kansas City with good demand while prices were barely steady at Ft. Worth due to nearness of the new crop.

Soybeans declined 3¢ at Chicago early in the week and with no improvement in demand continued at about that level. Prices advanced 2¢ at Minneapolis despite generally favorable prospects. Flaxseed markets continued to fluctuate with earlier gains offset by weakness later in the period. Drought in the producing sections of North Dakota and Canada continues an important factor in the market.

	Page
Feed grains - payment-in-kind export bids.....	2
Corn - amount under price support by states.....	7
Grains - amount under price support.....	8

FARMERS PUT A RECORD 637.3 MILLION BUSHELS ... of 1960-crop corn under price support through June 30. This compares with 529.2 million bushels of 1959-crop corn put under last year and the previous high of 550.9 million bushels from the 1948 crop. Loans repaid as of June 30 totaled 26.1 million bushels with 8.2 million bushels delivered to CCC.

FARMERS DELIVERED 241 MILLION BUSHELS ... of 1960-crop wheat to the Commodity Credit Corporation as of June 30. This compares with 169 million delivered from the 1959 crop. Farmers had resealed loans on 40.9 million bushels from the 1960 crop and 44.4 million from previous crops. Farmers delivered 93.6 million cwt. of grain sorghums from the 1960 crop as against 51.2 million from the 1959 crop. Farmers had resealed 12.7 million cwt. in farm-stored loans from the 1958, 1959 and 1960 crops. A little over 9.4 million bushels of barley from the 1960 crop were delivered to CCC with nearly 11 million placed under reseal. Reseal loans from previous crops totaled 20.6 million bushels. Deliveries of oats to CCC from the past two crops have been small. However, 7.2 million bushels from the 1960 crop were put under reseal while 15.2 million from the 1958 crop were under the extended reseal program as of June 30.

QUANTITY OF 1961-CROP WHEAT PUT UNDER PRICE SUPPORT ... through June 30 totaled over 18.0 million bushels. This compares with nearly 12.8 million bushels put under support from the 1960 crop. Of the 1961-crop wheat, 11.2 million bushels were put under support in Oklahoma, 4.1 million in Texas and 2.3 million in Kansas. Through June 30, about 4.5 million bushels of 1961-crop barley were under support of which 1.6 million bushels were in California and 1.2 million in Oklahoma. Also, farmers had put nearly 1.9 million bushels of 1961-crop oats under support.

CCC DOMESTIC WHEAT SALES ... increased sharply in the Minneapolis area due to the drought in the Dakotas and Canada. Both spring wheat and durum advanced sharply with prices above the statutory minimum. CCC sales in the area covered by the Minneapolis Commodity office totaled a little over 4 million bushels each week during the past three weeks. Sales since the middle of June totaled 13.4 million of which around 2.8 million bushels were durum wheat.

^{1/} Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

^{2/} Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

^{3/} Applies only to the varieties Baart and Bluestem of the sub-class Hard White.

^{4/} The monthly average price is the simple average of the daily closing prices.

QUARTERLY
SUMMARY
AND
STATISTICS

GRAIN DIVISION

AGRICULTURAL MARKETING SERVICE

UNITED STATES DEPARTMENT OF AGRICULTURE

Volume 4 No. 3

Washington 25, D. C.

July 27, 1961

Grain prices generally advanced during the April-June quarter. This trend continued into July and prices of all grains except corn were well above a year earlier. Weather, harvesting and crop conditions were major market factors. Wheat, corn and grain sorghum stocks were at record highs. Stocks of rye, oats and flaxseed were substantially larger, but soybean stocks dropped sharply and barley carryover was down slightly. Corn production for 1961 is expected to be 18 percent smaller than 1960, but soybean acreage is up 15 percent.

WHEAT ... prices advanced during July as prospects for spring wheat dropped to the lowest point since 1936. Durum wheat led the advance with gains of 85¢ per bushel from June 15 to July 13. Other spring wheat prices advanced during June and were about steady during July -- closing around 20¢ above the 1961 effective support rate. Winter wheat prices also felt the effects of the drouth with gains of 4-5¢ during July, despite marketings of the second largest crop of record. Prices at the end of July were close to the support level. In the Pacific Northwest, marketings were meager and prices near the end of July were 12¢ above the 1961 effective support rate. Carryover stocks of wheat on July 1 totaled a record 1.4 billion bushels of which 90 percent were Government owned or under CCC loan. The carryover was 7 percent above last year despite near record disappearance last season. This was due to the record exports of wheat and flour which totaled 661 million bushels. These were 112 million above 1956-57, the previous record, and 152 million above 1959-60. Grinding of wheat for flour increased due to large flour exports and totaled 595 million -- the largest since 1948-49. Domestic supplies of wheat for 1961-62 are expected to total 2,665 million bushels, about the same as for 1960-61.

RYE ... prices advanced steadily the last three months of 1960-61. They continued this trend into July, influenced by hot, dry weather, and for the first three weeks of the month averaged 15¢ per bushel higher than a year earlier. Domestic rye supplies for 1961-62 are estimated at 40.3 million bushels, about 2.7 million less than the previous year. July 1 stocks of 14.1 million bushels were up 35 percent from a year ago, but 1961-crop production is expected to be 19 percent smaller. No import quotas are in effect for rye this season. Disappearance of rye increased. Exports of almost 7.8 million bushels were 2.5 million heavier than a year ago. Alcohol and feed usage declined slightly.

CORN ... was the only grain with prices running below a year ago. By the end of the third week of July, corn prices averaged 4-7¢ per bushel below a year earlier. July 1 corn stocks in all storage positions reached a new high of 2.8 billion bushels -- 11 percent more than the previous record a year earlier. Production of corn for grain, forecast on this basis for the first time, is expected to total 3.2 billion bushels in 1961 -- 18 percent less than 1960. This reflected acreage diversions under the Feed Grain Program. Corn disappearance, October-June, in 1960-61 totaled 2.9 billion bushels -- 38 million more than a year earlier. Exports reached a record 208 million bushels the first nine months of the season, or 48 million more than a year ago. Feed usage of 14.6 bushels per animal unit was down slightly from the previous season. So were wet milling and alcohol usages.

OATS ... registered little change during the last three months of the 1960 season, but turned upward at the beginning of the new crop year. By July 20, prices were 4-8¢ per bushel above a year earlier. Domestic supplies for 1961-62 totaled almost 1.3 billion bushels -- nearly 133 million less than a year earlier. Although July 1 stocks of 324 million bushels were up 21 percent from a year ago, production of 961 million bushels for 1961 is down 16 percent from 1960. Disappearance of oats during 1960-61 dropped 58 million bushels below a year earlier, reflecting for the most part a 38 percent cut in exports. Seed and feed usage declined only slightly.

BARLEY ... markets drifted within a narrow range the final quarter of the 1960 crop year. However, they turned upward in July 1961 and for the first three weeks of the month averaged 27¢ per bushel higher than a year ago on malting type and 8-13¢ higher on feed barley. Domestic supplies for 1961-62 totaled 517.9 million bushels on July 1 -- 76.5 million less than a year earlier. Stocks in all positions the same date stood at 152 million bushels, or 9 percent less than a year ago. The 1961 crop is expected to total 366 million bushels -- 14 percent below 1960. Barley disappearance in 1960-61 amounted to 453.9 million bushels -- about 10 million less than in 1959-60. Feed usage was up 24.3 million bushels, but this was more than offset by a 31-million-bushel drop in exports.

GRAIN SORGHUM ... prices climbed steadily during the third quarter of the 1960-61 crop year. By July 20, they were 30-31¢ per cwt. above a year earlier. Record stocks of 421 million cwt. in all positions July 1 topped last year's July stocks by 18 percent. More than 90 percent of total stocks were either owned by or under loan to CCC. Grain sorghum disappearance the first nine months of 1960-61 totaled 262 million cwt. -- 22 million more than a year earlier. Feed usage was heavier, but exports dropped 19 percent from a year ago.

SOYBEANS ... fluctuated widely and sometimes wildly during the third quarter of 1960-61. High-pitched speculation in futures markets and concern over export demand and dwindling U. S. supplies had a tremendous influence on spot trading. Prices on July 20 ranged from 40-55¢ per bushel above a year earlier. Soybean stocks in all positions July 1 totaled 94 million bushels -- down sharply from a year ago and lowest since 1957. Most stocks were in off-farm positions. Soybean disappearance through the third quarter totaled 487.9 million bushels, or 28.8 million more than a year earlier. Crushing of 317.6 million bushels were 14.5 million above a year ago. Exports of 110.5 million bushels, however, were only 500,000 bushels ahead of this time last year. Soybean acreage for 1961 is estimated at 27.1 million acres -- 15 percent more than 1960 and a record high.

FLAXSEED ... prices began a skyrocket-like climb at the turn of the crop year, reflecting drouth conditions in major domestic and Canadian producing areas. No. 1 flaxseed averaged \$3.86 per bushel at Minneapolis for the first three weeks of July, or 93¢ above a year ago. Domestic supplies for 1961-62 are estimated at 24.7 million bushels -- 8.7 million less than the previous year. Carryover stocks in all storage positions July 1 totaled 5.4 million bushels. They were 80 percent above the record low stocks a year earlier but with that exception were the smallest since 1956. Flaxseed production for 1961 is forecast at 19.4 million bushels -- a third below 1960 and the smallest since 1938. Disappearance of 28 million bushels of flaxseed in 1960-61 was down 5 million bushels from 1959-60. Crashings for linseed oil, at nearly 20 million bushels, were 3.2 million below a year earlier. Exports, at 6.5 million, were down 1.8 million from a year ago.

NOTE: Data on stocks, production and seed usage from Crop Reporting Board; imports, exports and quantity of wheat, rye, soybeans, and flaxseed processed from Census Bureau; and alcohol usage from Internal Revenue Service. April-June 1961 data partly estimated.

1/ Includes stocks sold but not delivered.

2/ Includes both purchase agreements and quantities put under loan.

3/ Reported as of June 30, 1961. Does not include the following quantities of grain resaled: Wheat 40,918,481 bushels; barley 10,871,472 bushels; rye 1,359,265 bushels; oats 7,152,527 bushels; and grain sorghums 7,005,849 cwt.

4/ Total deliveries reported through June 30, 1961. May not include all grains delivered from 1959 resale program and does not include following grains reported June 30, 1961 under extended farm-stored resale; Wheat 18,987,988 bushels; barley 6,510,092 bushels; and grain sorghums 2,522,130 cwt.

5/ The principal deliveries from the 1960 corn support program will be made after July 31, the date when loan deliveries are due. Therefore, July 1 inventory includes only a small quantity of take-over from the current crop.

SOYBEANS AND DURUM WHEAT UP - OTHER GRAINS DOWN

Soybean and durum wheat prices advanced sharply but most other grains lost ground during the week ended July 27. Weather and crop conditions, the stocks report, and CCC sales were major market factors.

Winter wheat markets softened as harvesting neared its crest. However, pressure was diverted to some extent by laggard farm selling and very active mill demand, particularly for high-protein wheat. Spring wheat lost 3-6¢ per bushel at Minneapolis. Trading was rather quiet as buyers awaited harvest movement and more definite information about improved crop prospects following recent moisture in spring wheat producing areas. Durum wheat, on the other hand, shot up 13-15¢. Available supplies were tight and mills and exporters were aggressive in view of the short upcoming crop. White wheat advanced 7¢ at Portland where domestic and export demand exceeded only meager offerings from farmers. Rye held steady at Minneapolis, reflecting large stocks and quiet flour trade.

Corn prices weakened at most markets, influenced to some extent by the drop in grain sorghum prices. Demand was steady and CCC remained a major source of supplies. Oats lost 3-5¢ per bushel partly in sympathy with the softer corn market but mostly due to the large carryover which was 21 percent above a year ago. Barley markets were generally unchanged in more or less indifferent trading. Grain sorghum prices dropped 7-12¢ per cwt. at Fort Worth and 4¢ at Kansas City as harvesting moved northward into Central Texas and CCC announced that it would begin selling its stocks at market price.

Soybeans closed unevenly 4-16¢ per bushel higher, with the most advance at Chicago. Strength was attributed to small stocks, larger inspections for export, and renewed speculative interest on the futures market. Flaxseed, on the other hand, dropped 10¢ per bushel in Minneapolis as news that recent rains helped the crop considerably had a discouraging effect on buying enthusiasm.

PRICE-SUPPORT REQUIREMENTS FOR 1961-CROP WHEAT ... were relaxed this week to include light-weight wheat that otherwise would not be eligible for support. Light-weight wheat included under relaxed provisions will be "Sample" grade on test weight only, but no wheat testing less than 40 pounds per bushel will be eligible for support. Light-weight wheat will be discounted below the minimum test weight (50 or 51 pounds a bushel, depending on class) for Grade No. 5 wheat at the rate of 4¢ for each pound through 45 pounds per bushel, and 6¢ for each pound thereafter for wheat having a test weight of 40 through 44 pounds a bushel. This discount will be in addition to other required discounts and will be added to the discount of 9¢ per bushel for wheat grading No. 5 on test weight. Price support previously was limited to wheat grading No. 3 or better, or No. 4 or No. 5 on test weight only.

PRICE-SUPPORT REQUIREMENTS FOR 1961-CROP OATS ... have been broadened to include "badly stained or materially weathered" oats. Under broadened provisions, oats reduced to grade No. 4 because of the grading factor of "badly stained or materially weathered" will be eligible for support at a discount of 7¢ per bushel from the basic county support rate. Any premium for test weight of 36 or more pounds per bushel provided in price support provisions will not apply to these weather-damaged oats. Oats grading No. 4 because of test weight or weather damage must meet all other grading requirements for grade No. 3 oats to be eligible for support.

DURUM WHEAT SUPPLIES ... for 1961-62, currently estimated at 28.5 million bushels, are sharply below the 46.1 million available for 1960-61. Carryover stocks, estimated at 12 million, are about the same as last year but smaller than the three previous years. A crop of 16.5 million bushels was indicated by conditions at the first of July. If realized, this would be the smallest crop since 1954 and less than half that of last year. CCC sales of durum wheat totaled around 3.5 million bushels since the middle of June with the noncommitted inventory at 1.8 million bushels as of July 25.

^{1/} Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

^{2/} Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

^{3/} Applies only to the varieties Baart and Bluestem of the sub-class Hard White.

^{4/} The monthly average price is the simple average of the daily closing prices.

1/ Carlot receipts have been converted to bushels on the basis that 1 carlot equals 1,800 bushels.

2/ Of the June receipts 1,800 bushels were Mixed and the remainder Yellow soybeans. Inspections of soybeans in June included 3,675,000 bushels as cargo lots, 1,000,891 bushels as truck receipts, and the balance as carlot receipts.

Based on reports of inspections by licensed grain inspectors at all markets.

1/ Based on assumption that a bushel of soybeans yields 11.0 pounds of oil and 47.0 pounds of meal.

2/ Preliminary.

NOTE: This table is for statistical comparison only. It does not reflect actual operating margins since prices are simple averages and do not take into account location differentials or actual purchases and sales of soybeans, soybean oil or soybean meal.

WHEAT AND RYE ADVANCE. -- OTHER GRAINS UNCHANGED TO LOWER

Wheat and rye advanced moderately with a sharp gain for durum wheat during the week ended August 3. Grain sorghums, soybeans and flaxseed dropped sharply with other grains about unchanged. The weather continued generally favorable for corn and soybeans.

Winter wheat gained 2-3¢ per bushel with a sharp pickup in flour trade, continued heavy export demand and trade expectations of higher 1962 support prices the major strengthening factors. Spring wheat advanced 1-2¢ for the lower protein types but closed about unchanged for the higher proteins. Trading was slow with limited demand for light offerings. Durum climbed another 20¢ with the uncertainty of the new crop and sharply higher prices for semolina. White wheat reacted to last week's sharp advance and closed 3-4¢ below a week ago as expanded grower offerings met slow demand. Rye advanced 4¢ at Minneapolis with improved demand.

Corn dropped 2-3¢ per bushel at Kansas City, Omaha, and St. Louis with slow demand while prices gained 1-2¢ at Chicago, where receipts were limited. Growing conditions were ideal in most of the corn belt. Oats were steady to 1¢ higher with rains hindering harvest in some areas. Barley markets were practically unchanged with a fair demand for increased receipts. Grain sorghums dropped 8-10¢ per cwt. at Fort Worth and Kansas City with harvest general in larger areas and demand slow.

Soybeans declined 4-9¢ with a drop in demand from both domestic and export interests. Favorable weather and prospects for a bumper crop were weakening factors although a good demand is expected for the early harvest. Flaxseed lost 5¢ during the week at Minneapolis -- 55¢ above a year ago.

EXPORTS OF WHEAT AND FLOUR ... totaled 660.4 million bushels during the 1960-61 crop year according to official reports of the Census Bureau. These compare with 509.6 million exported during 1959-60 and 549 million the previous record in 1956-57. Of the exports last season, 560.8 million were as grain and 99.6 million bushels as flour. Exports of wheat and flour during July are estimated at 51 million bushels on the basis of inspections for export and other data. These compare with 43 million exported in July 1960. Corn exports during July are estimated at 20 million, bringing the total since October 1 to 231 million as against 176 million exported in the same months last year. Around 8 million bushels of soybeans were exported in July compared with 9.2 million in July 1960. Exports, October-July, totaled almost 120 million this season or only a little more than in the same period last season.

CCC SALES OF CORN ... totaled 287 million bushels October 1 through July 28 of which nearly 75 million were for export and 212 million domestic sales. Of the export sales during this period, 38.4 million were redemptions of certificates under the P.I.K. program, 28.8 million barter sales, 4.3 million credit sales and 2.5 million export donations. Most of the domestic sales were of corn not considered storable with 15 million from country warehouses, 134 million track and terminal and 16 million from bin sites. Included in domestic sales were around 850,000 bushels of corn sold in redemption of certificates by producers earned under the 1961 Feed Grain Program. The CCC sold 958,507 bushels under the Emergency Livestock Feed Program. CCC sold nearly 22 million cwt. of grain sorghums October through July this season of which 11 million were export sales and the balance domestic. Export sales included 6.3 million cwt. for redemption of P.I.K. certificates, 3.2 million barter sales and 0.6 million credit sales. Included in domestic sales were nearly 2 million cwt. for the Livestock Feed Program. Producers redeemed certificates for only 22,000 cwt. of grain sorghums under the 1961 Feed Grain Program. CCC dispositions against the certificate pool totaled 2,209,766 cwt. of grain sorghums July 1 through July 28. The sales policy for grain sorghums was announced June 19. CCC has made no corn dispositions against the certificate pool.

SOYBEAN SALES PRICING POLICY ... was announced August 3 for any soybeans CCC may acquire next summer from the 1961 crop. The purpose of the announced minimum is to help maintain market prices at not less than support level during the heavy marketing season this fall. The minimum price is the county support rate for No. 2 soybeans plus $16\frac{1}{2}$ cents per bushel. The $16\frac{1}{2}$ cent markup is arrived at by adding 5 percent of the national average support rate of \$2.30 per bushel and in-elevation charges of 5 cents per bushel.

^{1/} Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

^{2/} Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

^{3/} Applies only to the varieties Baart and Bluestem of the sub-class Hard White.

^{4/} The monthly average price is the simple average of the daily closing prices.

WINTER WHEAT ADVANCES -- OTHER GRAINS GENERALLY WEAKEN

Wheat prices showed a mixed trend during the week ended August 10 with higher prices for winter wheat offsetting lower spring wheat. Feed grains were about unchanged but rye, soybeans and flaxseed dropped sharply. The weather for corn and soybeans continued favorable for rapid development.

Winter wheat gained 1-4¢ per bushel with a good demand from exporters, blenders, and flour mills. Announcements of cutback in acreages and higher support price for the 1962 crop helped the advance. Spring wheat lost 3-4¢ with harvest of the new crop commencing. However, prices were 12-15¢ above the effective support. Durum wheat markets were unstable as harvest progressed and limited marketing began. Prices dropped 4-7¢ during the week. White wheat markets were unchanged to 1¢ higher under improved demand for light supplies. Rye prices dropped 5¢ with the harvest 85 percent completed in South Dakota and Minnesota.

Corn prices were unchanged to 2¢ lower despite smaller receipts. Demand was limited with interest mainly in nearby delivery. Excellent crop prospects assure plentiful supplies. Oats were unchanged to 2¢ lower with increased receipts and slightly smaller demand. Malting barley reacted downward with losses of 4¢ under pressure of heavy receipts while feeding types were mostly unchanged. Grain sorghums weakened slightly with harvest making good headway in Texas. Offerings were light but demand indifferent.

Soybeans declined 2-9¢ per bushel with prospects for a crop 18 percent above the previous record. Harvesting is expected to be reasonably early thus easing the pinch threatened by the near cleanup of old crop supplies. Flaxseed dropped 10¢ despite light receipts but harvest is expected to become general in a short time.

Report of yield and production, August.....	12

FEED GRAIN PROSPECTS ... improved during July as favorable weather raised the indicated yield, according to the Crop Reporting Board.. Excellent conditions in the major Corn Belt boosted the expected yield to a record high of 57.5 bushels per acre -- 3 bushels above the July estimate and the previous record set in 1960. A 3.35 billion bushel crop is now in prospect compared to the 1960 crop of 3.9 billion bushels. The August estimate of the barley and oats production is up slightly from July but both crops are below 1960. The grain sorghum crop, estimated at 455 million bushels, is down 25 percent from last year reflecting a comparable reduction in the acreage for harvest. Soybeans made excellent growth during July. A 15 percent increase in acreage and a record yield of 25 bushels per acre indicated a 1961 crop of 683 million bushels. This is 22 percent above last year and 75 percent above average. Winter wheat production prospects dropped 5 percent during July with the August 1 estimate at 1,058 million bushels -- 4 percent below last year. Spring wheat prospects improved with a durum crop of 17.9 million and other spring wheat at 129 million bushels. Both are sharply below last year. Details on page 12.

1962 WHEAT SUPPORT RATE ... set at \$2.00 per bushel -- the minimum national average rate in the 39-State commercial producing areas. This rate is contingent on producers approving marketing quotas in a referendum set for August 24. The support rate reflects 84.4 percent of the August 1961 parity of \$2.37 per bushel. The support rate for the 1961 crop averages \$1.79 per bushel. The new Wheat Stabilization program requires a mandatory 10 percent cut in acreage allotments established on the basis of the present 55-million-acre national allotment. The 10-percent reduction will be applied to all farm wheat allotments, regardless of size. Provision is made for an additional 30 percent voluntary reduction with special provisions for small farms. Conservation payments per acre for the mandatory 10 percent wheat acreage diversion would be equal to 45 percent of the county support rate times the adjusted yield per acre for the farm. The diverted acreage must be devoted to approved conservation uses.

FALL-SEEDED BARLEY ... to be included in the Agricultural Act of 1961 in a plan similar to the corn and grain sorghum program. Producers of fall-seeded barley who divert 20 percent of their barley base acreage will receive a payment equal to 50 percent of their normal production times the county support rate. An additional 20 percent may be diverted for which payment will be at a rate of 60 percent of normal production.

1/ Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

2/ Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

3/ Applies only to the varieties Baart and Bluestem of the sub-class Hard White.

4/ The monthly average price is the simple average of the daily closing prices.

Based on weekly reports of inspections for export by licensed grain inspectors and does not include rail or truck movement to Canada or Mexico. In some cases, the ultimate destination of the grain exported is not shown on the inspection reports. Therefore, the quantity for each country may vary from official Census data which are based on custom declarations.

* See page 10 for U. S. grains inspected for export from Canadian ports.

August 18, 1961

DURUM WHEAT RISES SHARPLY

Durum wheat prices advanced sharply during the week ended August 17 as millers and exporters actively competed for short supplies. Other spring wheat, feed grains, and flaxseed markets strengthened. Winter wheat and soybeans were generally unchanged. Rye prices, however, lost ground.

Winter wheat fluctuated within a narrow range and finished at about the same level as the previous week's close. Selling by farmers increased slightly, reflecting the more favorable relationship of cash prices to effective support rates. However, offerings still failed to satisfy good mill demand. Spring wheat went up 2-4¢ in the face of heavier receipts at Minneapolis, influenced by heavy flour sales recently and prospects for a smaller crop this year. Durum wheat jumped 17-20¢ as concern over a short supply became more intense with reports of purchases by France and Algeria of between 1.8 and 2.8 million bushels for September-October shipment. White wheat held firm at Portland as relatively light marketings met slow mill and export demand. Rye lost 4¢ at Minneapolis as stocks at public elevators continued to grow.

Corn markets closed unchanged to about 3¢ per bushel higher. Support stemmed from brisk demand. The growing crop made excellent progress in the Corn Belt, with maturity well ahead of a year ago in the western half. Oats and barley held firm with not much feature to either market. Grain sorghums went up 2-3¢ per cwt. behind good demand for meager offerings at Kansas City but lost 3¢ in slow trading at Fort Worth.

Soybean markets closed on a weak note, reflecting to a large extent the nearness of the new crop. Soybeans made excellent progress, with most fields setting pods and filling. Reports indicate a vigorous new-crop movement is now expected in Illinois around September 10. At the close of the week, September soybeans were quoted around \$2.31 per bushel at Illinois country points. Flaxseed advanced 8¢ per bushel in Minneapolis. The upturn was attributed mostly to light offerings, this year's short crop, and gains in U. S. and Canadian futures markets.

Special Features

	<u>Page</u>
Feed grains - payment-in-kind export bids.....	2
Wheat and flour - U. S. exports by months, 1952-61.....	7
Wheat and flour - U. S. exports by country of destination, July 1960-June 1961.....	8-9
Wheat flour - U. S. exports by customs districts, 1958-61.....	10-15
Grain products - U. S. imports and exports, July 1960-June 1961.....	16

WHEAT FLOUR EXPORTS ... during 1960-61 were the largest since 1948-49 and totaled 43.3 million cwt. or equivalent to almost 100 million bushels of grain. These exports compare with 39.4 million cwt. exported in 1959-60 and 35.0 million in 1958-59. The increase in exports last season reflect heavier shipments for relief or charity. Exports under this program totaled 12.5 million cwt. last season as against a little under 10 million in 1959-60. The largest increase in flour exports was in the Gulf area which accounted for nearly 29 million cwt. as against 24 million in 1959-60 and 22 million in 1958-59. This increase reflects abundant supplies of hard winter wheat and slightly higher prices for the hard spring wheats. Exports of flour through the St. Lawrence Seaway increased from around 1.2 million cwt. in 1958-59 to 4.2 million in 1960-61. Exports through the Atlantic Coast ports have been relatively stable at a little under 5 million cwt. Flour exports from the Pacific Coast ports dropped to 5.5 million cwt. from 7.8 million in 1959-60. This drop in part reflects the smaller flour exports to the Philippines from the Pacific since that country now buys wheat. Flour exports from the Pacific ports to the Philippines dropped from nearly 3 million cwt. in 1958-59 to 0.6 million in 1960-61 while exports of wheat as grain increased from 0.9 million in 1958-59 to 7.4 million in 1960-61. In 1960-61, 5.5 million bushels of wheat were exported to the Philippines from the Pacific Coast. The Galveston customs district including Houston and Corpus Christi, is by far the largest export district. Nearly 19 million cwt. of flour were exported from this district in 1960-61, an increase of 7 million cwt. over 1958-59. (The above data are based on a tabulation of Census monthly reports of flour exports by customs districts.) For details see pages 10-15.

BASIS FOR DETERMINING CCC MINIMUM WHEAT SALES PRICE ... was changed this week. Sales of CCC-owned wheat for unrestricted use will be made at the market price but not less than a minimum of the applicable support price plus flat mark-ups of 18¢ per bushel for wheat received by truck and 14¢ per bushel for wheat received by rail or barge.

^{1/} Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

^{2/} Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

^{3/} Applies only to the varieties Baart and Bluestem of the sub-class Hard White.

^{4/} The monthly average price is the simple average of the daily closing prices.

Washington 25, D. C.

August 25, 1961

GRAIN MARKETS LITTLE CHANGED

Cash grain markets generally showed little or no change during the week ended August 24. Trading was quiet. Buyers marked time while awaiting further developments in harvest and crop progress and the possibility of a grain handlers' strike at Chicago.

Winter wheat finished about unchanged. A firm undertone was apparent, however, reflecting the strong holding tendency of farmers and merchandisers, active export workings, and higher support rates and acreage cutbacks slated for 1962 production. Weather conditions throughout the Southwest were nearly ideal for seeding 1962-crop wheat. Spring wheat was down 3-4¢ per bushel while durum held steady at Minneapolis. Spring wheat flour business and new export orders were scarce, but there was a substantial amount of durum bought on a "to arrive" basis. White wheat went up 3¢ behind aggressive export demand for continued slow marketings at Portland. Rye gained 3¢ at Minneapolis.

Corn prices fluctuated within a narrow range and closed about unchanged from the previous week. Other feed grains showed a similar trend. There was not much market influencing news for feed grains. Supplies were limited by small receipts and, although sometimes difficult to locate, were generally ample for trade needs. Growing corn continued to make excellent progress in the major producing area. Harvesting of grain sorghums was resumed in Texas and prices came down 4¢ per cwt. at Ft. Worth, but the Kansas City market held steady on light offerings.

Soybeans held firm at Minneapolis and Toledo but went up 16¢ per bushel at Chicago. Strength at Chicago was attributed to the expected late maturity of this year's crop, uncertainty over a strike of elevator operators and handlers, and a strong processing demand for remaining stocks. Soybeans, like corn, found almost ideal growing conditions throughout the main producing area. Flaxseed lost 3¢ under pressure from increased offerings in Minneapolis.

Special Features

Wheat and flour - export program rates	9
Cash wheat prices and effective support rates	10
Wheat - amount under price support by states	11
Grains - amount under price support	12

- 2 -

PRICE SUPPORT ACTIVITIES ... through July 31 showed that farmers had put 129.9 million bushels of 1961-crop wheat under price-support loans and purchase agreements. This compares with 126.9 million bushels of 1960-crop wheat under support the same date a year earlier. Of the 1961 total, 123.3 million bushels were warehouse-stored loans, 6.5 million bushels farm-stored loans, and slightly over 39,000 bushels were under purchase agreements. Three states -- Kansas, Oklahoma, and Texas -- accounted for about 87 percent of the wheat under support. Farmers also had put 15.9 million bushels of 1961-crop barley under support as of July 31 compared with 4.7 million a year earlier. About 4.4 million bushels of 1961-crop oats were under support compared with 1.2 million a year ago.

FOOD FOR PEACE DOLLAR CREDIT AGREEMENT ... was announced this week with El Salvador to finance the sale of about 920,000 bushels of wheat and flour. Agreement is the first to be made under Title IV of Public Law 480, which provides for use of U. S. agricultural commodities to assist the economic development of friendly countries through extension of long-term dollar credits. Sales will be made by U. S. private traders.

NEW QUALITY PREMIUMS FOR 1962-CROP WHEAT ... will be included in 1962 price-support operations. Premiums will be for quality of hard red spring and hard red winter wheats as indicated by sedimentation tests. Purpose is to reflect the quality value in producer support prices, thus encouraging production of higher quality wheat. New premiums for quality will supplant the present protein premiums now included in the wheat price support loan rate schedule.

PRELIMINARY RESULTS OF WHEAT REFERENDUM ... show that 79.4 percent, or 211,199 of the 265,886 farmers in the 39-state commercial wheat producing area voted for marketing quotas for the 1962 wheat crop. Last year 87.4 percent, or 156,134 of the 178,718 farmers voting favored marketing quotas. Since approval was by more than the necessary two-thirds of the farmers voting in the referendum, marketing quotas will be in effect for the 1962 wheat crop. This marks the eleventh time that farmers have voted favorably on marketing quotas for wheat.

^{1/} Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

^{2/} Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

^{3/} Applies only to the varieties Baart and Bluestem of the sub-class Hard White.

^{4/} The monthly average price is the simple average of the daily closing prices.

NOTE: Data represents the production of all commercial mills in the United States. About 97 percent of the totals were reported by 284 mills having a daily capacity of 401 sacks or more and the balance estimated. The estimated portion is based on a survey of the smaller mills in 1958. Bureau of the Census.

In addition to the above, shipments of wheat and corn as grain in bushels were as follows: Wheat to Algeria, 20,966; Greece 1,667; India 436,250; Morocco 880,767; Pakistan 186,333. Corn to Guatemala, 10,946; India 71,875; Indonesia 4,821; Mexico 279,215; Nicaragua 15,786; Pakistan 48,214; Vietnam 1,429. Total wheat 1,525,983 bushels, and corn 432,286 bushels.

1/ This is equivalent to 27,065,595 bushels of wheat as grain and 12,435,453 bushels of corn as grain.

The following export payment rates pursuant to terms and conditions of the Wheat and Wheat Flour Export program, GR-345 and GR-346 (IWA and Non-IWA) apply from 3:31 p.m. August 24, to 3:30 p.m., e.d.t. August 25, 1961.

Volume 9 No. 35

Washington 25, D. C.

September 1, 1961

GRAIN MARKETS GENERALLY WEAKEN

Cash grain markets were mostly unchanged to slightly lower in generally quiet trading during the week ended August 31. Corn, soybeans and flaxseed lost ground with prospects of new crop supplies arriving in the near future. Development of the corn crop was ahead of a year ago and the average in most of the corn belt. The bulk is also now considered safe from frost damage.

Winter wheat fluctuated within a narrow range and closed unchanged to 2¢ lower. Merchandisers and blenders absorbed most of the offerings with little interest from the mills. Reduction in acreage with a \$2.00 loan for the 1962 crop was a factor in the tight holding by farmers. Spring wheat prices were unchanged for the ordinary protein but gained 1-5¢ for the higher protein. Demand for the high protein wheat was spurred by lighter receipts and good mill demand. Durum wheat advanced 5¢ per bushel with increased interest from macaroni manufacturers. White wheat closed 1¢ lower in the Pacific Northwest with light marketings and slow demand. Rye dropped 3¢ per bushel with limited demand and increased offerings.

Corn markets weakened with the favorable maturing weather and prices declined 1-3¢ per bushel at most markets. Trading was limited by light supplies. Oats gained 1¢ at Minneapolis with light receipts but lost 1-2¢ at Kansas City and Chicago. Barley strengthened on the West Coast but was about unchanged at the midwest markets. Grain sorghums went up 2¢ per cwt. at Kansas City behind meager offerings but lost 1¢ in slow trading at Fort Worth.

Soybean markets closed on a weak note reflecting nearness of the new crop. Crop prospects continued generally excellent with the new harvest expected in a short time. Flaxseed demand was light and prices dropped 6¢ at Minneapolis.

37 WHEAT VARIETIES ... undesirable because of inferior milling or baking qualities will be discounted 20 cents per bushel in price-support rates on the 1962 wheat crop. The number and varieties are unchanged from those for the 1961 crop, except for the inclusion of Wasatch variety as undesirable in Colorado.

In a further effort to encourage quality wheat production, premiums for quality as indicated by sedimentation tests will be included in the 1962 price-support operation for Hard Red Spring and Hard Red Winter classes of wheat. Undesirable varieties will not be eligible for these premiums.

Average prices received by farmers, effective parity, and support rates

^{1/} Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

^{2/} Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

^{3/} Applies only to the varieties Baart and Bluestem of the sub-class Hard White.

^{4/} The monthly average price is the simple average of the daily closing prices.

1/ Carlot receipts have been converted to bushels on the basis that 1 carlot equals 1,800 bushels.

2/ Of the July receipts, 400 bushels were Brown and the remainder Yellow soybeans. Inspections of soybeans in July included 3,825,000 bushels as cargo lots, 677,330 bushels as truck receipts, and the balance as carlot receipts.

Based on reports of inspections by licensed grain inspectors at all markets.

September 8, 1961

GRAIN MARKETS STRENGTHEN

Cash grain prices generally strengthened in more active trading during the holiday-shortened week ended September 7. Soybeans were down but most of the loss represented an adjustment to a new-crop basis.

Winter wheat edged up 1-2¢ per bushel on continued light selling in the country, good domestic demand, and active export workings. Merchandisers and blenders provided the major outlet. Spring and durum wheat buyers were aggressive bidders for light supplies and prices went up 3-6¢ for spring wheat and 10¢ for durum. White wheat went up 3¢ at Portland with strength attributed to strong holding by farmers and moderate export interest. Rye held firm at Minneapolis with smaller receipts encouraging buying interest.

Corn markets fluctuated within a narrow range and closed generally unchanged. Traders seemed to assume a sideline position while awaiting maturity of the new crop. Offerings were about in line with demand at most markets. Oats advanced around 3-5¢ at major markets, reflecting good demand, limited offerings, and crop trouble in Canada. Barley prices were mostly unchanged except for a 4¢ advance on malting type at Minneapolis. The upturn reflected small marketings. Grain sorghums weakened in Ft. Worth as offerings picked up with the increased harvest activity. Kansas City prices, however, held firm on light offerings.

Soybean prices leveled down to a new-crop basis. Decatur received a car of new beans from Southern Illinois on Wednesday and harvesting of new beans was well under way in Missouri. Dry weather hastened maturity in most producing areas but development was still slightly behind average. Weakness in soybean futures and in oil and meal markets along with expectations of an increase in the September crop estimate also weighed heavy against spot prices. Flaxseed went up 3¢ behind aggressive buying in Minneapolis.

FOOD FOR PEACE AGREEMENT WITH UAR (EGYPT) ... announced this week will finance the sale by private U. S. traders of about 33 million bushels of wheat and/or wheat flour and about 4 million bushels of corn. The agreement is the largest ever negotiated with the UAR under Title I of Public Law 480.

REALIGNMENT OF AMS GRAIN INSPECTION SUPERVISION ... became effective in Grain Division field offices this week. The new plan set up nine area offices to provide more direct supervision of USDA's grain inspection program throughout the United States. The Board of Appeals and Review will be continued at Chicago to provide uniformity in interpretation of the standards on a national basis. District offices will continue to handle supervision and appeals as they have in the past. The nine new area offices are located at: Baltimore, Maryland, Portland, Oregon; New Orleans Louisiana (one for rice only and one for grain); Chicago, Illinois; Galveston, Texas; Kansas City, Missouri, Omaha, Nebraska, and Minneapolis, Minnesota.

ADDITIONAL DETAILS OF BROADENED LIVESTOCK EMERGENCY FEED PROGRAM ... were announced this week. This expanded program will combine: (1) the emergency assistance announced August 11, 1961 under which Commodity Credit Corporation-owned feed grains can be purchased for "primary" or foundation livestock at 75 percent of the 1961 support price; and (2) the assistance previously offered for other eligible livestock through the purchase of CCC-owned feed grains at current support prices. Broadened program is expected to be in operation soon in states and counties previously designated as disaster areas and in which eligible ranchers and farmers could buy CCC-owned feed grains under the old program.

Feed grain payment-in-kind export bids, September 1-7, 1961

^{1/} Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

^{2/} Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

^{3/} Applies only to the varieties Baart and Bluestem of the sub-class Hard White.

^{4/} The monthly average price is the simple average of the daily closing prices.

GRAIN MARKETS FIRM IN QUIET TRADING

Cash grain markets were generally firm during the week ended September 14. Winter wheat, rye, and flaxseed advanced but other grains showed little or no change. Trading was quiet with demand good for limited offerings.

Winter wheat advanced 1-3¢ per bushel behind good export and domestic demand. Mill buying was slow. Although prices were generally above the effective farm rates, farm selling was very limited. Spring wheat markets weakened slightly for the ordinary protein types but advanced as much as 4¢ for the higher proteins. Spring wheat with 17 percent protein sold at premiums at 25-27¢ over the ordinary. Prices were around 15-20¢ above the effective support. Even at the higher premiums, producers were not inclined to sell and receipts dropped sharply. Trading in durum was quiet but steady except at the close when a 2¢ drop was reported. White wheat lost about 1¢ in quiet dealings as pending trade looked smaller. Rye gained 4¢ per bushel with some export demand for light receipts.

Corn markets were generally steady at mostly unchanged prices. The September 1 forecast of a 5 percent increase in production and the USDA announcement to sell CCC corn representing certificates were generally expected and had little immediate effect on the cash market. However, corn futures dropped 1-2¢ per bushel. Inquiry was good for the limited offerings. Oats lost 2¢ at Minneapolis in a reaction to last week's sharp gain. Marketings increased although demand was good at the lower level. Barley markets were firm despite increased receipts. Grain sorghums were unchanged at Ft. Worth and steady to 5¢ per cwt. higher in Kansas City with offerings limited. Offerings were about in line with the slow demand.

Trading in soybeans was limited by practically no offerings of old crop beans. Movement of the new crop, while ahead of last year, is not expected in volume for some time. Most prices were on a new crop basis. The forecast of a record 720 million bushel crop was anticipated and had little effect on the market. Flaxseed gained 8¢ with buying quite active, and receipts down sharply.

	<u>Page</u>
Feed grains - payment-in-kind export bids	2
Wheat, Hard Red Spring and Hard Red Winter - distribution by protein brackets.	7
Report of yield and production	8

CROP PROSPECTS ... improved during August with nearly perfect weather for corn, soybeans and grain sorghums. Estimated corn production jumped 5 percent to 3.5 billion which is still 10 percent below the 1960 crop. Grain sorghum prospects improved 6 percent with the September 1 estimate 480 million, sharply below the 1960 crop of 608 million. Other feed grain prospects improved slightly. A record soybean crop of 720 million was indicated September 1 -- 24 percent above the previous record in 1958. The crop was well ahead of last year and only slightly later than average.

CCC-OWNED CORN ... representing certificates issued to producers under the 1961 feed grain program, will be offered for sale at market prices. Initially the corn will be made available for those areas where supplies may be needed to aid in maintaining feed grain prices at reasonable levels for livestock producers and to help stabilize prices for consumers of livestock products. These sales should have little effect on producers of 1960-crop corn because much of the crop has been marketed or has passed out of producer's hands. This will also carry out the program's objective of financing the operation through payments in kind from government stocks.

PRICE-SUPPORT ELIGIBILITY FOR 1961-CROP RYE has been broadened to include rye grading No. 4 on test weight only and on rye grading No. 3 or No. 4 because of thin rye. This action was taken because of drought conditions in the Dakotas, Minnesota, Montana, and neighboring States.

PROTEIN CONTENT OF HARD WINTER WHEAT ... is down sharply this year on the basis of receipts tested in the Kansas and Missouri laboratories in Kansas City, during July and August. At the Missouri laboratory only 12 percent of the wheat tested 12 percent protein or over this year compared with 21.6 percent last year and 40.5 during the 1959-60 crop year. At the Kansas laboratory, 29 percent of the receipts during July and August tested 12 percent or over as against 41.7 during 1960-61 and 59.0 for 1959-60. Spring wheat tested at Minneapolis during August was about equal to average. (Details, page 7).

1/ Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

2/ Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

3/ Applies only to the varieties Baart and Bluestem of the sub-class Hard White.

4/ The monthly average price is the simple average of the daily closing prices.

September 22, 1961

GRAIN MARKETS MIXED

Cash grain markets showed a mixed trend during the week ended September 21. Wheat and rye were unchanged to higher with a generally good export demand. Feed grains and oilseeds generally weakened reflecting new crop supplies in the offing. Trading was light with supplies limited.

Hard winter wheat finished mostly unchanged with a good demand for most offerings. Exporters were good buyers with reports of heavy buying from CCC. Soft Red Winter wheat gained 2-3¢ per bushel reflecting tight farm holding. Spring wheat advanced 3-4¢ with buyers bidding aggressively for moderate offerings. Protein premiums advanced 1-2¢ in all brackets. Durum wheat was up 4¢ as buyers bought substantial amounts to arrive. Trading in white wheat in the Pacific Northwest was slow with domestic and export business dull. No. 1 soft white sold at \$2.13 per bushel at Portland. Rye gained 5¢ reflecting light receipts and some export interest. No. 2 rye sold at \$1.24-1.28 at Minneapolis at the close.

Corn markets continued slow with excellent maturing weather for the large new crop. Price changes were small with some weakness noted. Demand was only fair. Oats dropped 1¢ at most markets with limited demand for light offerings. Barley was mostly unchanged at midwestern markets in quiet trading but gained 1¢ per bushel at most Pacific Coast points. Grain sorghums lost 1-2¢ per cwt. reflecting nearness of large supplies of new crop offerings.

Soybeans continued to weaken with reports that new crop combining was rapidly picking up with prospects of liberal marketing shortly. The weather was excellent for maturing the new crop. Trading was mostly on a new-crop basis. Export demand was expected to pick up shortly. Flaxseed dropped 3¢ due to limited inquiry.

Special Features

Feed grains - payment-in-kind export bids.....	2
Wheat - amount under price support by states.....	7
Grains - amount under price support.....	8

PRICE SUPPORT ACTIVITIES ... through August 31 showed that farmers had put 198.6 million bushels of 1961-crop wheat under price support. This compares with 252.4 million put under by the comparable date last year from the 1960 crop and 174.2 million bushels of 1959 wheat through August 1959. The total put under support during August was 68.7 million as against 125.5 million in August 1960. Of the total put under support through August, farmers had repaid loans on 6.8 million bushels - mainly in the States of Texas, Oklahoma and Kansas. Farmers put 26.3 million bushels of barley under support by August 31 compared with 9.6 million a year earlier and 5.7 million bushels of oats as against 2.1 million last year. Nearly 8.3 million cwt. of grain sorghums were put under support this year - more than double the 3.7 million put under by August 31 last year. Details pages 7-8.

HARD WHEAT PREMIUM SCHEDULE ... under the 1962 wheat price-support program was announced. Premiums ranging from three to 24 cents per bushel will be paid for varying qualities of hard red spring, hard red winter, and hard white wheat as measured by the baking quality (sedimentation) test. The schedule for the 1962 crop provides for premiums on hard wheats with baking quality values of 40 or above on the quality scale. Wheats with a value of 40 or higher are preferred for commercial bread baking. Hard wheats with no test or testing below 40 will be supported at the basic loan rate for the county under the 1962 program. The following premiums will be added to the basic county loan rate to determine the support price: Baking quality 40-44, 3¢; 45-49, 6¢; 50-54, 10¢; 55-59, 14¢; 60-64, 19¢; 65 and over 24¢ per bushel.

^{1/} Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

^{2/} Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

^{3/} Applies only to the varieties Baart and Bluestem of the sub-class Hard White.

^{4/} The monthly average price is the simple average of the daily closing prices.

GRAIN MARKETS SHOW MIXED TREND

Cash grain markets continued to show a mixed price trend during the week ended September 28. Net changes, however, generally were limited to around 2-3¢ per bushel, up or down.

Winter wheat prices fluctuated within a very narrow range but closed about unchanged. Although cash prices were above effective support levels, farmers maintained a firm holding policy. This along with a vigorous export trade provided a prop to the cash market. Spring wheat declined 1-3¢, with premiums off as much as 8¢ in the top protein brackets, and durum was down 2-4¢ at Minneapolis. Weakness in spring wheat was attributed to quiet flour trade, closing of Buffalo's milling capacity due to the strike, and substantial sales of CCC-owned spring wheat. Late export interest helped durum recover some of its early loss, but here again the Buffalo strike was a factor. White wheat, supported by the firm holding tendency of farmers and prospects for favorable export trade, held about steady at Portland. Rye closed 2¢ lower at Minneapolis, reflecting a softer futures market and reports that West German demand was not nearly as large as had been first anticipated.

Corn markets more or less drifted along with little change in prices. Futures sank to new seasonal lows and the buying basis weakened. Receipts were light. Warm weather hastened maturity and virtually all of the 1961 crop in the Corn Belt has reached the denting stage. Oats lost 3-4¢ at principal markets, reflecting lower futures prices, and barley weakened behind slow demand. Grain sorghums lost 3-6¢ per cwt. at Kansas City under pressure from the impending new crop and CCC offerings. However, prices went up 2¢ at Fort Worth as the Texas harvest hit a lull between early and late fields.

Soybeans showed a weaker trend as processors seemed fairly well supplied and preferred to wait out peak harvest movement in a search for bargains from stocks that were unable to find cover. Weather conditions favored the new crop, but with farm prices below loan levels, very few beans sold in the country. Flaxseed lost 3¢ in Minneapolis.

Wheat - supply and distribution in four exporting countries.....	11

WHEAT SUPPLIES ... available for export or carryover in the four principal exporting countries (United States, Canada, Argentina and Australia) totaled 2.6 billion bushels on September 1. This is 370 million less than on the same date a year earlier. U. S. supplies on September 1 were down by about 60 million due mainly to the smaller crop. Supplies in Canada on September 1 totaled 592 million - a drop of nearly 260 million from a year ago. This reflects the smallest crop since 1937. Supplies in Argentina were less than half those of a year ago while the Australian supplies were down only slightly. Exports of wheat and flour from these four countries, July through the middle of September, totaled around 270 million - an increase of 55 million over the same period last year. Exports from Argentina for this period are down to less than a fifth of last year. Exports from each of the other countries, July through September 15, are sharply above last year - ranging from more than double for Australia to 30 million above for Canada and 20 million above for United States.

CCC Grain Sales against Certificate Pool, Cumulative through September 22, 1961

Sales of Commodity Credit Corporation-owned grain represent certificates issued to producers under the 1961 Feed Grain Program. Sales of grain sorghums began in July, and barley and corn in September. Through September 26, only 13,312 bushels of corn had been reported sold against Certificate Pool. This was sold by the Minneapolis Commodity office.

Agricultural Stabilization and Conservation Service - Grain Division.

^{1/} Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

^{2/} Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

^{3/} Applies only to the varieties Baart and Bluestem of the sub-class Hard White.

^{4/} The monthly average price is the simple average of the daily closing prices.

1/ Carlot receipts have been converted to bushels on the basis that 1 carlot equals 1,800 bushels.

2/ Of the August receipts, 500 bushels were Mixed and the remainder Yellow soybeans. Inspections of soybeans in August included 1,516,000 bushels as cargo lots, 508,672 bushels as truck receipts, and the balance as carlot receipts. Based on reports of inspections by licensed grain inspectors at all markets.

Volume 9 No. 40

Washington 25, D. C.

October 6, 1961

GRAIN MARKETS GENERALLY WEAKEN

Cash grain prices generally moved within narrow limits but traveled a weaker course during the week ended October 5. Spring wheat, however, was an exception and edged a little higher.

Winter wheat declined 1-3¢ per bushel as domestic and export demand slacked off. Although farmers continued a tight holding policy, country elevators stepped up their offerings in an effort to make room for oncoming fall grains. Spring wheat finished about a penny higher and durum gained 3-4¢ at Minneapolis as smaller offerings found buyers anxious to accumulate supplies despite slow flour sales. White wheat was unchanged at Portland where domestic and export demand slowed in the face of continued firm holding by producers. Rye held steady in quiet trade at Minneapolis.

Corn was down 1-4¢ per bushel under pressure from CCC sales and first arrivals of new-crop corn at several markets. Low cash prices pinched spot offerings to little more than a trickle. Oats and barley markets were generally unchanged in quiet trading. Grain sorghum prices dropped 15-18¢ per cwt. at Kansas City, reflecting heavier new-crop offerings and continued pressure from CCC sales. However, sorghums held firm at Fort Worth as offerings were light with most of the new crop moving into loan.

Nearness of the peak harvest period had a weakening influence on cash soybean prices. Trading was quiet and moved within a narrow range most of the week. Harvest conditions improved rapidly and volume movement of new-crop beans is expected to get underway next week. Very few early-harvested beans have been sold by farmers so far mainly because of the differential between spot prices and loan value. However, there is some trade speculation over whether storage space is sufficient to house the new crop or crowded bins eventually will force increased selling. Flaxseed lost 4¢ at Minneapolis.

Special Features

	Page
Grain - CCC Sales against Certificate Pool.....	2
Feed grains - payment-in-kind export bids.....	2
Corn, grain sorghums and soybeans - prices by months at principal markets, 1956-61.....	7-9
Corn, grain sorghums and soybeans - average farm prices by months, 1956-61	9
Average farm prices, parity and support rates.....	10
Wheat - supply and distribution, monthly.....	10
Grains - CCC dispositions.....	11
Grains - U. S. exports, August.....	11

FINAL NATIONAL AVERAGE 1961-CROP CORN SUPPORT PRICE ... will be \$1.20 per bushel -- unchanged from the minimum "advance" support price announced last March 22. Final county support rates also will remain unchanged from the minimum rates as announced June 27.

THE SEDIMENTATION TEST ... which is an indicator of the bread baking qualities of wheat -- will be run on representative samples from each of an estimated 1,500 export cargoes of U. S.-produced hard red spring and hard red winter wheats in the next year. Protein tests also will be run on these cargoes. Results of the tests will be studied by the Commodity Credit Corporation and other USDA agencies as part of an overall program to introduce quality factors into the supply and management of wheat. The results of tests on individual cargoes will not be published but summaries of the tests will be available for analytical purposes.

^{1/} Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

^{2/} Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

^{3/} Applies only to the varieties Baart and Bluestem of the sub-class Hard White.

^{4/} The monthly average price is the simple average of the daily closing prices.

GRAIN MARKETS REACT UPWARD

Most cash grain prices advanced during the week ended October 12 in a reaction to recent declines. Light selling by farmers added support to the market.

Winter wheat held steady at Ft. Worth but went up 2-4¢ per bushel at midwest markets. Producer supplies remained in tight hands. Interior and terminal elevators generally supplied the aggressive demand of mills and exporters. Spring wheat gained 2-3¢ and durum shot up 16-17¢ at Minneapolis, with millers and exporters bidding against each other for the short supply of durum. White wheat was about unchanged at Portland. Rye advanced 3¢ on light arrivals at Minneapolis.

Cash corn prices advanced 1-6¢ per bushel on trade rumors of a change in CCC's selling policy. Oats took a cue from corn and went up 1-4¢ per bushel at principal markets. Barley was generally unchanged. Grain sorghum prices held firm behind fair to good demand.

Soybeans advanced 3-6¢ per bushel as sales were not heavy despite the increased tempo of the harvest. Trade reports continued to stress the high percentage of beans going into storage to wait for a higher market or to go into loan. A 10-million-bushel reduction in the October 1 crop forecast and a sharp increase in inspections for export also had a strengthening influence on spot markets. Flaxseed finished 3¢ under a week ago at Minneapolis, with a considerable amount selling on a "to arrive" basis.

MALTING BARLEY VARIETIES EXEMPTED FROM 1962 FEED GRAIN PROGRAM ... this week include: Atlas, Barbless, Betzes, Forrest, Hanna, Haisa II, Hannchen, Heines Hanna, Idaho Club, Kindred, Manchuria, Montcalm, Moravian, O.A.C. 21, Oderbrucker, Odessa, Parkland, Traill, White Winter, Winter Club, and Winter Tennessee. Producers who plant these malting varieties for 1962 harvest will be eligible for exemption from the 1962 feed grain program in California, Colorado, Idaho, Illinois, Iowa, Michigan, Minnesota, Montana, Nebraska, North Dakota, Oregon, South Dakota, Washington, and Wisconsin. They can plant only the acceptable varieties in 1962; their 1962 barley acreage cannot exceed 110 percent of the 1959-60 average acreage; and their corn and grain sorghum acreage cannot exceed 1959-60 average acreage. Producers also must have approval from the county ASCS Committee to be eligible for the exemption.

FIRST FOOD FOR PEACE AUTHORIZATIONS ISSUED TO EL SALVADOR ... this week provide for financing the purchase of about 25,000 metric tons of wheat from U. S. suppliers. Authorizations were issued under Title IV of Public Law 480.

^{1/} Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

^{2/} Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

^{3/} Applies only to the varieties Baax and Bluestem of the sub-class Hard White.

^{4/} The monthly average price is the simple average of the daily closing prices.

- 1/ Includes 114,000 bushels shipped from Pacific ports.
2/ Includes 134,000 bushels shipped from Pacific ports.
3/ Includes 328,000 bushels shipped from Lake ports.
4/ Includes 2,896,000 bushels shipped from Pacific ports.
5/ Shipped from Pacific ports.

NOTE: Of the total corn inspected for export October 1960-September 1961, 6,106 bushels were White corn exported through Gulf ports.

Based on weekly reports of inspections for export by licensed grain inspectors and does not include rail or truck movement to Canada or Mexico. In some cases, grain exported is not shown on inspection reports. Therefore, the quantity for each country may vary from official Census data which are based on custom declarations.

GRAIN MARKETS MIXED

Grain markets showed a mixed trend during the week ended October 19. Wheat was unchanged to lower while rye and soybeans advanced. Corn and grain sorghums advanced or declined depending on the local situation. Marketings were generally light.

Winter wheat was unchanged to 1¢ lower with demand about equal to the relatively light receipts. Extremely slack farm selling was offset by expanded elevator offerings. Export trade was the principal supporting influence. Spring wheat dropped 3¢ reflecting the slow domestic demand of bakers. Despite the drop, prices were around 15¢ per bushel above the effective support. Flour sales were reported as dull with milling operations near peak of capacity. Durum wheat dropped 15-16¢ with demand limited. White wheat gained 1¢ in the Pacific Northwest with moderate export and domestic demand and slow country selling. Rye gained 7¢ reflecting demand from West Germany where reduced production has increased needs for large imports from both United States and Canada.

Corn gained 2-3¢ at Omaha and Kansas City where demand was good for light offerings. Prices were unchanged to 2¢ lower at Chicago, St. Louis and Minneapolis with interest limited. The crop continued to mature under generally favorable conditions but the moisture content was considered too high for safe cribbing. Oats showed little change but barley gained 2-5¢ with good domestic and export demand. Grain sorghums advanced 5-6¢ per cwt. at Kansas City with good demand and light supplies but dropped 2¢ at Ft. Worth.

Soybeans advanced 5-6¢ per bushel reflecting largely the small receipts. Primary receipts of 6,304 cars during the week were less than half last year's 12,338 cars for the comparable week. Midwest harvesting of soybeans was favored by fine weather and was reported drawing rapidly to a close. Flaxseed remained steady under small carlot receipts with prices unchanged at Minneapolis.

Wheat - amount under price support by States.....	7
Grains - amount under price support.....	8

PRICE SUPPORT ACTIVITIES... through September 30 showed that farmers had put 230.2 million bushels of 1961-crop wheat under price support. This is 94 million more than the comparable date a year earlier. Farmers had repaid loans on about 18 million bushels of this year's crop. Farmers put 34.7 million bushels of barely under support by September 30 compared with 20.4 million a year earlier and 10.3 million bushels of oats as against 7.3 million last year. Nearly 12.8 million cwt. of grain sorghums were put under support this year -- sharply above the 4.6 million put under a year earlier. (Details pages 7-8).

FOOD FOR PEACE AGREEMENT WITH PAKISTAN... announced this week will finance the sale by private U. S. traders of \$621,550,000 worth of agricultural commodities. Included will be \$341.1 million for wheat and wheat products and \$23.6 million for feed grains.

^{1/} Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

^{2/} Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

^{3/} Applies only to the varieties Baart ^{Burt} and Bluestem of the sub-class Hard White.

^{4/} The monthly average price is the simple average of the daily closing prices.

GRAIN: Commodity Credit Corporation Estimated Non-committed Inventory
(All data in 1,000 bushels except grain sorghums in 1,000 cwt.)

STATISTICS

GRAIN DIVISION

AGRICULTURAL MARKETING SERVICE

UNITED STATES DEPARTMENT OF AGRICULTURE

Volume 4 No. 4

Washington 25, D. C.

October 27, 1961

Grain prices generally advanced during the July-September quarter, reflecting higher support levels, limited marketings, and good demand. Wheat strengthened with record exports and a short spring wheat crop. Flaxseed and rye also advanced due mainly to smaller crops. Most feed grains sold well above last year, although grain sorghum prices declined during the period as a result of heavy supplies. Soybeans followed an erratic course but prices were well above last year with good demand for dwindling supplies.

WHEAT ... prices turned upward during the first quarter of the 1961-62 season. This reflected good domestic and export demand, somewhat smaller offerings, and the higher 1962 support rate. Winter wheat ranged fractionally to 3¢ per bushel above effective support the third week of October. Spring wheat was sharply above last year and 15¢ more than support due mainly to the smallest crop since 1936. Durum wheat was \$1.15 higher. White wheat at Portland averaged 20¢ above support and 10¢ above last year. Stocks of wheat in all positions October 1 totaled 2.3 billion bushels, only slightly below a year earlier. Of these, 1.5 billion bushels were either owned by Commodity Credit Corporation or under loan. Wheat and flour July-September exports reached 168² million bushels -- 27 million more than a year earlier. Supplies of wheat for export or carryover in the four countries (United States, Canada, Argentina and Australia) totaled 2.5 billion bushels on October 1 as against nearly 2.9 billion a year ago. Supplies of wheat in Canada for 1961-62 totaled 783 million compared with 1 billion for 1960-61.

RYE ... markets strengthened during the first quarter this season. This trend continued into October, influenced by smaller crops in this country, Canada and Western Europe. For the first three weeks of October, rye at Minneapolis averaged 18¢ per bushel above a year earlier. Stocks in all positions totaled 28.9 million bushels this October as against 35.6 million a year ago. Disappearance of rye the first quarter totaled 11.8 million bushels -- 2.1 million above last year. Exports of a little under a million bushels were down 43 percent. Milling and alcohol usage was about the same as a year earlier.

CORN ... prices at the farm last season averaged 4¢ per bushel below a year earlier. For the first three weeks of October, market prices averaged 3¢ higher. Markets strengthened from good export and domestic demand for small offerings. A record yield per acre of 60.5 bushels brought the 1961 crop to 3.5 billion bushels -- only 9 percent below last year despite a reduction of 18 percent in the acreage. Supplies of corn for 1961-62, based on the October forecast, totaled 5.5 billion -- 3 percent below 1960-61. Carryover stocks of old-crop corn October 1 totaled almost 2 billion bushels, 211 million above the previous year's record. Of these, CCC owned or had outstanding loans on 94 percent of the crop. Disappearance of corn during the 1960-61 season totaled 3.7 billion bushels -- 3 percent above the previous season. Exports of 275 million bushels were a record. Commercial disappearance was at a high rate. Quantity used for feed was 3.2 billion -- up slightly

from a year earlier. Corn fed per animal unit totaled 19.3 bushels last season, compared with 19.1 the year before.

OATS ... prices at the farm averaged 3¢ per bushel above a year ago for the first three months of the season, reflecting the higher support level and smaller supplies. Oats prices eased off slightly during October but averaged well above last year except in the Pacific Northwest where they were down by around 10¢ per bushel. Oats stored in all positions October 1 totaled 957 million bushels -- 11 percent less than a year ago. July-September disappearance of 360 million bushels of oats was 6 percent above last year but with that exception the smallest since 1940. Exports of 5.3 million were less than half those of last year. Canadian supplies of 422 million for 1961-62 compare with 549 million for 1960-61.

BARLEY ... prices advanced steadily during the first three months of the 1961-62 season due mainly to the smaller supplies and the higher support rate. Farm prices averaged 12¢ above a year ago during the first quarter. October market prices were 13¢ per bushel above a year earlier for feeding types and 33¢ higher for malting barley. October 1 stocks of 424 million were 10 percent below a year earlier but 17 percent above average. First-quarter disappearance amounted to 112 million -- 15 million below a year earlier. Exports of nearly 9 million were less than half those of last year. Quantity used for alcohol was about the same but feed consumption was down slightly. Barley supplies in Canada for 1961-62 of 228 million were 100 million below 1960-61 due to the poor crop outturn.

GRAIN SORGHUMS ... markets weakened under pressure from new-crop harvesting during the final quarter of the 1960-61 season. Despite the losses, market prices the first three weeks of October averaged 17-25¢ above last October. From July through October 20, CCC sold 22.5 million cwt. of grain sorghums against the 1961 Feed Grain Certificate Pool. Record stocks of 392.4 million cwt. of old-crop grain sorghums on October 1 topped last year's carryover by 20 percent. Disappearance of 273.7 million cwt. of grain sorghums last season, mostly for feeding, set a new record. Exports of 38 million cwt. were 30 percent below the previous year. Supplies for 1961-62, on the basis of October 1 estimates, totaled 660 million cwt. -- 6 million below 1960-61.

SOYBEAN ... prices fluctuated sharply during the 1960-61 season with monthly averages at Chicago ranging from \$2.11 in November to \$3.23 in April. By the third week of October, prices were 30¢ above a year ago. Carryover stocks of 6.0 million bushels were one-fourth those of last year and the smallest since 1956. However, a crop estimated at 710 million for 1961-62 will provide the largest supplies of record -- 134 million more than in 1960-61. Soybean disappearance hit a record 576 million last season. Crushings totaled 402 million -- 8 million above last year. Exports of 128 million were 13 million below the 1959-60 season.

FLAXSEED ... prices gradually declined during the first quarter of the 1961-62 season. The average for the first three weeks of October was 26¢ below July but 73¢ above October 1960. Higher prices this season reflect the advance in the support level and smaller supplies. Flaxseed stocks October 1 totaled 17.8 million bushels -- 32 percent below last year and the smallest since records began in 1947. First-quarter crushings totaled 5.2 million bushels; exports, 800 thousand bushels.

NOTE: Data on stocks, production and seed usage from Crop Reporting Board; imports, exports and quantity of wheat, rye, soybeans, and flaxseed processed from Census Bureau; and alcohol usage from Internal Revenue Service. July-September 1961 data partly estimated.

1/ Owned and stored in bins or other storage owned or controlled by CCC. Additional CCC-owned grain is included in other positions.

2/ All off-farm storages not otherwise designated.

3/ Does not include Canadian wheat milled in bond, but includes about 10,000,000 bushels of wheat used annually for breakfast food.

4/ Mostly quantity fed, but includes industrial use, waste, loss, and statistical errors in estimates.

October 27, 1961

GRAIN MARKETS LITTLE CHANGED

Cash grain prices generally traveled within a narrow range and closed with little or no change for the week ended October 26.

Winter wheat, dominated by the tight holding policy of farmers and good export demand, held firm. Seeding of 1962-crop winter wheat was about complete. Cash prices were hardly high enough above effective support prices to induce farmers to sell their holdings or to redeem wheat under loan. Spring wheat also held firm but durum gained 7-8¢ per bushel at Minneapolis. End of a work stoppage at one large Buffalo mill created an extra outlet for spring wheat which remained in light supply at Minneapolis. Export buyers entered the durum market at Minneapolis and small receipts found good demand despite slow semolina business. White wheat held steady at Portland where farm marketings remained light and foreign sales were smaller than expected. Rye weakened at Minneapolis, reflecting the trend at Winnipeg.

Corn prices edged up 1-2¢ per bushel at principal markets, influenced mainly by good demand for light offerings. High moisture content of the 1961 crop delayed harvesting and limited marketings by farmers left industries and exporters anxious bidders for small receipts. Oats ruled on the weak side with supply and demand in fairly good balance. Barley markets were mixed -- strong at some markets but weak at others. Export workings remained heavy but subsidy payments were lower. Grain sorghums held steady at Ft. Worth but declined 3¢ per cwt. at Kansas City. Demand was good. However, heavier movement had a weakening effect in Kansas.

Soybeans closed virtually unchanged. Harvesting neared completion but cash marketings remained light. Although October 1 stocks were down from a year ago and current exports are ahead of this time last year, buying pressure was off as urgent requirements are being satisfied. Flaxseed was down 3¢ at Minneapolis where export interest lagged.

GRAIN STOCKS ... in all positions October 1 were at record high levels for old-crop corn and grain sorghums, according to the Crop Reporting Board. Stocks of nearly 2 billion bushels of corn and 701 million bushels of grain sorghums were about 12 and 20 percent, respectively, higher than the previous high last October. Most of these were either owned by or under control of CCC. Wheat stocks of 2.3 billion bushels were down a little from record holdings a year earlier. About two-thirds of the wheat stocks were either owned by or under CCC control. Stocks of oats, barley, rye, soybeans, and flaxseed were all below a year ago. October 1 carryover of around 6 million bushels of soybeans was only about a fourth as large as a year earlier and was the smallest since 1956.

^{1/} Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

^{2/} Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

^{3/} Applies only to the varieties Baart ^{Burt} and Bluestem of the sub-class Hard White.

^{4/} The monthly average price is the simple average of the daily closing prices.

November 3, 1961

GRAIN MARKETS SHOW WEAK TREND

Most cash grain markets showed a tinge of weakness in narrow trading during the week ended November 2. Spring wheat was the only exception and it strengthened.

Winter wheat finished unchanged to slightly lower. Selling by farmers continued light, but offerings by merchandisers and country elevators provided enough wheat to satisfy fairly active mill and export demand. Spring wheat advanced 3¢ at Minneapolis as light receipts prompted buyers to up the premium basis despite slow flour trade. Durum wheat, however, was down 7-8¢ with export buyers moving to the sidelines. White wheat weakened at Portland as heavy offerings at terminals and limited mill demand offset the strengthening effect of heavy export bookings. Rye lost 3¢ at Minneapolis.

Corn prices were unchanged to 2¢ per bushel lower at principal markets. Wet weather delayed harvesting. Farmers who had picked their corn were not pushing to make deliveries and offerings from the country remained light. Prices drifted lower, however, reflecting the lack of any urgent buying interest. Oats and barley were generally unchanged, with demand about matching the relatively light offerings. Weakness in grain sorghums reflected slower demand and the easier corn market.

Soybean prices drifted within narrow bounds and closed on the weak side. Harvesting was virtually complete but movement from the country remained light as producers maintained a tight holding policy. Exports were brisk but many traders gave more weight to easiness of end products. Flaxseed dropped 13¢ at Minneapolis, reflecting larger local receipts and the lower market at Winnipeg.

Feed grains - CCC sales against Certificate Pool.....	12

MINIMUM PRICING GUIDELINE FOR SALES OF CCC-OWNED CORN AND GRAIN SORGHUM ... against certificates issued to producers for diverting feed grain acreage under the 1961 feed grain program was announced recently. Certificate sales will continue to be made at market prices but not at levels below generally prevailing prices received by farmers in the fall of 1960 for the 1960 crop. USDA also stated that until further notice, all CCC domestic dispositions of corn and grain sorghums for unrestricted use will be in redemption of certificates represented by payments under the 1961 feed grain program.

FIRST WHEAT SIGNUP REPORT ... showed that 159,811 wheat-producing farms had been signed through October 19 to divert 1,922,988 acres under the 1962 wheat stabilization program. This diversion of 1.9 million acres is slightly more than 42 percent of the 4,555,429 program acres on the farms signed to date but excludes program acres for Minnesota and Kentucky which had not been reported. USDA pointed out that while the signup is underway in 37 states, many counties in these states have not yet reported. Signup had not started by October 19 in the other two commercial wheat-producing States of North and South Dakota. Also, signup is not yet underway in other spring wheat producing areas in states where winter wheat is produced.

INITIAL FALL-SEEDED BARLEY SIGNUP REPORT ... showed that 11,026 winter barley-producing farms had been signed up through October 19 to divert 233,519 acres under the 1962 feed grain program. Average 1959-60 barley plantings on these farms were 387,457 acres. This initial report is incomplete in several respects. Many counties have not yet reported signup activity. Also, this first report covers winter barley-producing areas and does not include any of the major barley-producing states where the crop is spring planted.

^{1/} Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

^{2/} Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

^{3/} Applies only to the varieties Baart and Bluestem of the sub-class Hard White.

^{4/} The monthly average price is the simple average of the daily closing prices.

1/ Carlot receipts have been converted to bushels on the basis that 1 carlot equals 1,800 bushels.

2/ Of the September receipts, all were Yellow soybeans. Inspections of soybeans in September included 1,461,000 bushels as cargo lots, 1,966,888 bushels as truck receipts, and the balance as carlot receipts.

Based on reports of inspections by licensed grain inspectors at all markets.

November 9, 1961

MOST GRAIN MARKETS STRENGTHEN

Most cash grain prices either held steady or advanced slightly in light trading during the holiday-shortened week ended November 8.

Winter wheat was unchanged at Ft. Worth but advanced 2-3¢ per bushel at midwest markets. Farmers maintained a tight holding policy even though cash prices were above effective support rates. Domestic buyers were active and competed with export interests for offerings from terminal and interior elevators. Spring and durum wheat held generally steady at Minneapolis. White wheat was unchanged at Portland. Rye went up 3¢ at Minneapolis. Demand was not much improved but interest continued to center on the amount of U. S. rye that Germany will buy this year.

Cash corn prices held firm, bolstered by the slow rate of picking and increased export interest. Oats went up 2-4¢ per bushel at principal markets as light receipts found good demand. Barley was about unchanged as a rule. Grain sorghums held steady at Ft. Worth but advanced 4¢ per cwt. behind more aggressive demand at Kansas City.

Soybeans showed the most change, advancing 4-5¢ per bushel. Farmers continued to show a tight holding policy. Processors, pushed by the strong demand for soybean meal and export competition, upped their bids in an effort to coax more beans from the country. Flaxseed remained unchanged at Minneapolis.

Wheat - supply and distribution, monthly.....	12

REVISION IN OCTOBER 1 WHEAT STOCKS ... announced this week changed the quantity stored in mills and elevators in Texas from 219,052,000 bushels to 181,595,000 bushels. This revision changes the October 1 total wheat stocks in all positions to 2,304,108,000 bushels. Quarterly disappearance of wheat for July-September 1961 is now nearly complete, with the items in 1,000 bushels as follows: Milled for flour 152,557; seed usage (still an estimate) 18,000; exports (wheat only) 139,137; feed and residual 8,872; and total disappearance 318,566. These data correct the wheat supply and distribution table in the October 27 quarterly issue of Grain Market News.

FEED GRAIN PAYMENT-IN-KIND EXPORT BIDS ... submitted during the week ended November 8 were not accepted. Therefore, the table which usually shows this information will not be published this week.

^{1/} Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

^{2/} Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

^{3/} Applies only to the varieties Burt and Bluestem of the sub-class Hard White.

^{4/} The monthly average price is the simple average of the daily closing prices.

Volume 9 No. 46

Washington 25, D. C.

November 17, 1961

GRAIN MARKETS LITTLE CHANGED

Cash grain prices showed little change during the week ended November 16. Net changes generally were limited to 1 or 2¢ per bushel.

Wheat prices closed on a firm note for all classes. Movement of winter wheat from the country remained light, while merchandisers, mills and exporters offered good demand for available offerings. Winter wheat stands showed good growth in the Southwest and were well advanced in the central and northern Great Plains. Rye weakened at Minneapolis as flour sales were slow and export business failed to encourage much buying.

Cash corn prices firmed up at most markets as wet weather delayed harvesting in some areas and farmers continued to display somewhat of a holding attitude. Receipts picked up one or two days but many of these were high-moisture corn. Some export business also gave a little support to the spot market. Oats and barley held firm behind good demand for light receipts. Grain sorghum markets weakened slightly.

Soybeans were irregular -- strengthening at Chicago and Toledo but weakening at Minneapolis and Illinois country points. Marketings remained light, but this was offset by weakness in oil and meal markets. Flaxseed declined in light trading at Minneapolis.

Special Features

	<u>Page</u>
Feed grains - CCC sales against Certificate Pool	2
Wheat and flour - export program rates	7
Corn, grain sorghums and soybeans - harvested acreage, yield and production	8
Feed grains - payment-in-kind export bids	8

CCC-OWNED FEED BARLEY WILL BE OFFERED FOR SALE ... at market price from warehouses and CCC bin sites in the area served by the Minneapolis Agricultural Stabilization and Conservation Service Commodity office. This area includes the States of Minnesota, North Dakota, Montana, South Dakota, and Wisconsin. Sales from CCC bin sites will be handled by ASCS county offices and from warehouses by the Minneapolis commodity office. These dispositions will be in redemption of certificates represented by payments under the 1961 Feed Grain Program.

SALES OF CCC OATS STOCKS ... in the area served by the Portland ASCS Commodity office will be made at market price at point of delivery, as determined by CCC. Most of these stocks are at interior points in Washington, Oregon, and California. Sales will be recorded as redemptions of certificates represented by payments under the 1961 Feed Grain Program.

WHEAT ACREAGE DIVERSIONS ... under the 1962 wheat stabilization program totaled nearly 4.2 million acres through November 2. The total of 299,507 wheat-producing farms signed up to participate in the program amounts to about 16.6 percent of the 1,798,535 farms eligible to participate in the 38 states where the signup is underway. These states planted 48,836,000 acres of wheat in 1961.

^{1/} Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

^{2/} Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

^{3/} Applies only to the varieties Burt and Bluestem of the sub-class Hard White.

^{4/} The monthly average price is the simple average of the daily closing prices.

Volume 9 No. 44

Washington 25, D. C.

November 24, 1961

GRAIN MARKETS GENERALLY STEADY

Most cash grain prices either held steady or advanced slightly in moderate trading during the holiday-shortened week ended November 22.

Winter wheat held unchanged to 2¢ per bushel higher with demand good for limited offerings. Both domestic and export buying continued strong but farm selling remained slack. Spring wheat markets softened with prices fractionally lower. Mill buyers were fairly active but appeared to be well supplied. Durum wheat was steady in limited trading. White wheat was unchanged at Portland. Market was sluggish with lack of interest in limited offerings. Rye continued at last week's level with a lack of exports balanced by small arrivals.

Corn markets were firm with prices unchanged to 2¢ per bushel higher. Wet weather continued to hamper harvesting and marketings of the new supplies were light. A good export demand lent strength to the market. Oats and feeding barley continued steady with light supplies and limited inquiry. Malting barley weakened under pressure of increased offerings. Grain sorghums registered little change with demand and supply in close balance.

Soybeans closed about unchanged from a week ago although markets had been easier earlier in the period. Marketings, although slow, appeared to meet most needs from both export and crusher interests. Over 36.2 million bushels of soybeans were crushed during October as against 35.6 million one year earlier. Flaxseed remained unchanged in Minneapolis.

Grains - barge inspected receipts and shipments by midwest river markets, October.....	7
Wheat, rye, corn, oats, barley, grain sorghums, soybeans and flaxseed - amount under price support by states.....	8-11
Grains - amount under price support.....	12

FEED GRAIN PAYMENT-IN-KIND... export activity was limited to barley during the week ended November 22. Bids were accepted for 210,000 bushels of barley for January-February shipment at 2¢ per bushel. There were no other bids accepted.

WHEAT ACREAGE DIVERSIONS ... under the 1962 wheat stabilization program totaled 5.4 million acres through November 9. The total of 367,316 farmers signed up to participate in the program amounts to about 19.6 percent of the 1,873,339 farms eligible to participate in the 39 States where the signup is underway. By November 9 farmers had signed up 525,976 acres of barley under the Feed Grain Program.

PRICE SUPPORT ACTIVITIES ... through October 31 showed that farmers had put 241 million bushels of 1961-crop wheat under price support. This compares with 356 million from the 1960 crop by the same date last year. Farmers had repaid loans on nearly 29 million bushels of this year's crop. In addition farmers had put 39 million bushels of barley, 15 million of oats, 16 million of soybeans and 27 million cwt. of grain sorghums under price support. All of these were above last year with soybeans more than four times above and grain sorghums more than double. (Details pages 7-12).

^{1/} Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

^{2/} Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

^{3/} Applies only to the varieties Burt and Bluestem of the sub-class Hard White.

^{4/} The monthly average price is the simple average of the daily closing prices.

GRAIN MARKET SHOWS MIXED TREND

Cash grain markets were mixed during the week ended November 30. Prices, however, generally showed little or no change except for a sharp advance in durum wheat and a drop in flaxseed.

Winter wheat prices held mostly steady in the hard wheat area but were a little stronger in the soft wheat area. Recent market strength and the favorable relationship of cash prices to effective support levels failed to spur any increase in selling by farmers. Available offerings found ready outlets to mill and export interest. Spring wheat ruled firm and durum advanced 9-10¢ per bushel on lighter receipts at Minneapolis. White wheat found dull export trade and prices weakened at Portland. Rye was generally unchanged at Minneapolis with slow flour sales and no sign of increased export sales.

Corn prices ranged anywhere from 2¢ per bushel higher to 4¢ lower but finished about unchanged for the most part. Harvesting was delayed further by wet, muddy fields and farm selling remained light. Most receipts were high in moisture but demand was good enough to encourage shading of moisture discounts. Oats and barley ruled mostly steady in slow trading. Receipts were light but so was demand. Grain sorghums held firm behind good demand for light offerings.

Soybean prices edged up 1-3¢ per bushel as producers continued to show a tight selling policy. A vigorous rate of crushings and exports also added support to the market. Flaxseed prices dropped 7¢ in Minneapolis. The market lacked spark as crushers appeared to have ample stocks and were not interested in accumulating large quantities of flaxseed at this time.

WHEAT AND BARLEY ACREAGE DIVERSIONS ... under the 1962 Wheat Stabilization and Feed Grain programs totaled 6,760,410 and 647,281 acres, respectively, through November 16. This is 34.1 percent of the program acres on wheat farms signed to date and 47 percent of the base acres on signed barley farms.

FEED GRAIN PAYMENT-IN-KIND ... export bids accepted during the week ended November 30 were nil.

^{1/} Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

^{2/} Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

^{3/} Applies only to the varieties Burt and Bluestem of the sub-class Hard White.

^{4/} The monthly average price is the simple average of the daily closing prices.

^{5/} Preliminary.

1/ Carlot receipts have been converted to bushels on the basis that 1 carlot equals 1,800 bushels.

2/ Of the October receipts, 500 bushels were mixed and the remainder Yellow soybeans. Inspections of soybeans in October included 15,736,000 bushels as cargo lots, 13,327,913 bushels as truck receipts, and the balance as carlot receipts.

Based on reports of inspections by licensed grain inspectors at all markets.

Soybean prices compared with market value of soybean oil and soybean meal

Month	Soybean oil		Soybean meal		Value of:	Market	Spread
	Average price at crushing plant	Value from bu. of soybeans 1/	Bulk price at Decatur	Value from bu. of soybeans 1/	oil and meal from:	Price of Yellow soybeans 1/	between soybean price and value of oil and meal
	Cts. per pound	Dollars	Dollars per ton	Dollars	Dollars	Dollars per bu.	Cents
November 1961.....	10.4	1.14	59.70	1.40	2.54	2.38	16
October 1961.....	10.6	1.17	55.55	1.31	2.48	2.33	15
September 1961....	10.5	1.16	59.60	1.40	2.56	* 2.27	29
August 1961.....	10.8	1.19	68.90	1.62	2.81	2.63	18
July 1961.....	10.9	1.20	65.00	1.53	2.73	2.59	14
Nov. 1960.....	10.0	1.10	44.50	1.05	2.15	2.05	10

1/ Based on assumption that a bushel of soybeans yields 11.0 pounds of oil and 47.0 pounds of meal. * New crop.

NOTE: This table is for statistical comparison only. It does not reflect actual operating margins since prices are simple averages and do not take into account location differentials or actual purchases and sales of soybeans, soybean oil or soybean meal.

December 8, 1961

MIXED TREND RULES GRAIN MARKETS

Wheat, soybean and flaxseed prices strengthened during the week ended December 7, but corn and rye lost ground. Other cash grains were little or no different from a week earlier.

Winter wheat edged up 1-2¢ per bushel at Kansas City and held firm at other major markets. Cash prices were well above effective support rates and at or near the highest levels of the crop year. Farmers continued to show a tight holding attitude. Limited offerings, mostly from warehouse stocks, met active demand and were readily absorbed by mills and exporters. Spring wheat advanced 4-5¢ and durum jumped up 15-16¢ at Minneapolis. Both wheats were in short supply and there was too much interest to keep prices in line. White wheat held steady at Portland where export trade was inactive. Country offerings remained slow even though cash price was 15¢ above effective support. Rye declined 2¢ at Minneapolis. Offerings were light but most users had no immediate supply problem in view of the dull trade in rye flour.

Cash corn prices dropped 3-7¢ per bushel. Weather favored picking in unharvested fields and movement into domestic market channels picked up. Much of the corn being marketed, however, was high in moisture. Farmers remained slow sellers of corn that was suitable for crop storage or that might qualify for price support loans. Offerings at principal markets, meanwhile, proved fully adequate for trade needs. Oats went up 3¢ on light receipts at Minneapolis but held mostly steady in light trading elsewhere. Barley also was mostly steady except at Minneapolis where malting finished weaker. Grain sorghums showed little change.

Soybean prices firmed up a little near the close. Firmness stemmed from light receipts and higher meal prices. Flaxseed advanced 10¢ per bushel at Minneapolis, reflecting strength at Winnipeg and a small gain in linseed meal prices.

OFFERS TO PURCHASE ABOUT 17,643,150 POUNDS OF ROLLED WHEAT ... for domestic donation to needy families, the school lunch program, institutions and voluntary welfare agencies, and also for foreign donation were announced by USDA recently. These offers are the first requested for rolled wheat.

CCC SALES POLICY ON SPRING WHEAT FOR EXPORT FROM ATLANTIC COAST PORTS ... during the forthcoming period of closed navigation on the Great Lakes will be continued as at present, according to an announcement made this week.

INCREASES IN 1962 DURUM ACREAGE ALLOTMENTS AND PRICE SUPPORT ... to encourage increased production of this class of wheat now in short supply were announced this week. Under this special program, 1962 wheat acreage allotments, after the 10 percent minimum diversion under the Wheat Stabilization Program, may be increased up to 40 percent of the 1960-61 average plantings of durum. Differentials of 10¢ per bushel for ordinary durum, 25¢ for amber durum, and 40¢ for hard amber durum will be added to basic county wheat price-support rates.

FEED GRAIN PAYMENT-IN-KIND ... export bids accepted during the week ended December 7 were nil.

^{1/} Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

^{2/} Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

^{3/} Applies only to the varieties Baart ^{Burt} and Bluestem of the sub-class Hard White.

^{4/} The monthly average price is the simple average of the daily closing prices.

1/ Reported on the basis of registrations of sales under the Payment-in-kind Program (GR-345) and the Cash Payment Flour Export Program (GR-346).

2/ Exports at domestic prices. (See explanation of U. S. export programs on page 5)

UNITED STATES GRAIN EXPORT PROGRAMS

Following are brief explanations of various programs under which the United States exports grains. These explanations do not include all details of the various programs. They are intended only to present highlights of the programs.

Export sales usually must be made at prices somewhat below domestic price levels to enable U.S. exporters to sell in foreign markets on a competitive basis with commodities produced in other countries. Except for flour, the Department of Agriculture uses Commodity Credit Corporation-owned grains, not cash, in making payments to exporters for differentials between domestic prices and world prices.

In the case of wheat, export payment, based on the differential between domestic and world prices, is made in the form of a certificate redeemable only in CCC-owned wheat at seaboard location. Other than this, exporters obtain supplies from regular commercial sources. Value of the payment-in-kind certificate is based on the number of bushels of wheat exported and the export payment rate per bushel in effect on the date of the export sale. This program covers export sales under the International Wheat Agreement as well as to non-IWA countries.

In the case of feed grains, export payment rates are established through competitive bids of exporters who submit bids for an export payment rate in cents per bushel together with a statement of quantities to be exported. Export payment for feed grains is made in the form of a payment-in-kind certificate redeemable in CCC-owned feed grains.

Dollar Sales: Export sales made without need for assistance other than the payment-in-kind program, which is designed to bridge the gap between domestic and world prices, are "dollar sales." There are, however, instances of limited export sales of wheat made at domestic prices.

Title I, Public Law 480: These sales are made pursuant to formal government-to-government agreements with friendly countries. Actual sales are made from commercial stocks through private U.S. exporters. CCC finances the dollar payment to exporters and the importing country deposits the dollar equivalent in its currency to the United States account.

Title II, Public Law 480: These exports consist of government-to-government donations of CCC-owned commodities for emergency and work relief uses by the recipient government. No payment is required.

Barter, Title III, Public Law 480: Barter contracts with private U.S. firms are entered into by CCC which provide for exchange of CCC-owned agricultural commodities for strategic and other materials.

Section 416 of the Agricultural Act of 1949 and Title III, Public Law 480: These exports are made up of donations to the needy of foreign countries through U.S. private relief and charity agencies. Commodities donated excluding processed products come primarily from stocks of CCC.

Section 402, Public Law 665 (Mutual Security Act): These exports are paid for with the currency of the recipient country under varying terms and conditions. However, in contrast to currencies accruing under Title I, these currencies are almost entirely restricted to ICA (Mutual Security) economic development and technical assistance uses.

Title IV, Public Law 480: Agreements are entered into with governments of friendly countries for delivery of U.S. surplus agricultural commodities for periods up to 10 years. Dollar payment with interest for commodities delivered is required to be made in approximately equal annual amounts. Credit periods of up to 20 years are authorized.

WHEAT AND FLOUR: Exports from major exporting countries

COUNTRY	WHEAT (GRAIN ONLY) 1/					WHEAT AND FLOUR	
	FOR WEEK ENDED 2/			TOTAL November 1 TO		July-Oct.	July-Oct.

December 15, 1961

GRAIN MARKETS CONTINUE TO SHOW MIXED TREND

Wheat markets softened but corn and flaxseed prices strengthened during the week ended December 14. Other cash grain prices showed little or no change. Trading slowed with the approaching holiday season.

Winter wheat prices weakened, influenced largely by a slight pick up in country selling and pre-holiday dullness in export trade. Another weakening factor was the anticipated increase in selling by farmers which usually follows the turn of the year. Demand was fair for available offerings. Spring wheat weakened slightly but durum was off 8¢ per bushel at Minneapolis. Receipts of spring wheat fell off following heavy snows but mill demand appeared less urgent as domestic and export flour sales slowed. Durum receipts were a bit larger but buyers were more selective as holiday dullness hit the semolina market and export competition was lacking. White wheat held mostly steady at Portland. Rye ruled firm at Minneapolis with trading on the quiet side.

Corn prices advanced 2-4¢ per bushel at most markets. Marketings picked up in comparison to recent weeks, but offerings found ready outlets. Trading was active as buyers were fairly eager to make purchases for domestic as well as export needs. Oats borrowed a little strength from corn and barley held steady. Receipts of both were light. Oats found good demand but interest in barley was slow. Grain sorghums firmed up slightly as light offerings found improved demand as a result of heavier winter feeding requirements.

Soybeans closed barely steady. Country selling remained light. Export inspections were down but this weakening factor was about offset by strength in the soybean oil market. Flaxseed advanced 5¢ in line with the futures market at Minneapolis.

^{1/} Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

^{2/} Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

^{3/} Applies only to the varieties Baart ^{Burt} and Bluestem of the sub-class Hard White.

^{4/} The monthly average price is the simple average of the daily closing prices.

GRAIN MARKETS LITTLE CHANGED

A typical holiday atmosphere prevailed at cash grain markets during the week ended December 21. Prices generally closed little different from a week earlier.

Winter wheat finished on the weak side in the hard wheat area but ruled firm in the soft wheat area. Offerings continued light. Mill demand was good but export interest slacked off. Spring wheat held firm and durum advanced 5-8¢ per bushel at Minneapolis. Buyers were not too anxious to take spring wheat as flour sales declined. The short crop and lack of offerings helped push durum prices higher. White wheat prices weakened at Portland where export trading was very limited. Rye softened despite light arrivals at Minneapolis.

Corn prices closed on a steady to weak note. Country selling remained light but commercial and export demand was being satisfied with CCC corn that was finding its way from country or terminal storage into commercial channels. Oats and barley showed little change in light trading at most markets, but buyers were willing to pay 2¢ per bushel more for some types of malting barley at Minneapolis. Grain sorghums held firm behind slightly improved demand.

Soybean prices fluctuated within a narrow range and closed generally little changed for the period. Inspections for export were down from a year ago, but the market found support from the Census report that November crushings were about 2 million bushels more than both a month and a year ago. Flaxseed held steady at Minneapolis.

Special Features

	Page
Feed grains - CCC sales against Certificate Pool.....	2
Feed grains - payment-in-kind export bids.....	7
Crop production - annual summary.....	7
Wheat, rye, corn, oats, barley, grain sorghums, soybeans and flaxseed - amount under price support by states.....	8-11
Grains - amount under price support.....	12

A 944-MILLION BUSHEL 1962 WINTER WHEAT CROP ... was forecast by the Crop Reporting Board on the basis of December 1 conditions. This is 12 percent less than the 1-billion-bushel 1961 crop but 8 percent larger than the 10-year average.

PRICE SUPPORT ACTIVITIES ... through November showed that farmers had put 244.6 million bushels of 1961-crop wheat under price-support loans and purchase agreements. This is 120.1 million bushels, or about 33 percent, less than a year earlier. Of the 244.6 million bushels of 1961-crop wheat put under support this year, farmers had repaid loans on 39.8 million bushels. About 70.5 million bushels of 1961-crop soybeans also had been put under support through November. This was more than five times the amount put under support a year earlier. Only 4.7 million bushels of 1961-crop corn had been put under support this year compared with 21 million a year ago. Farmers had put less rye and flaxseed but more oats, barley and grain sorghums under support than a year earlier. (See details on pages 8-12.)

^{1/} Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

^{2/} Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

^{3/} Applies only to the varieties Baart and Bluestem of the sub-class Hard White.

^{4/} The monthly average price is the simple average of the daily closing prices.

December 29, 1961

CASH GRAIN PRICES UNCHANGED TO LOWER

Cash grain markets were mostly unchanged to lower in light trading during the holiday-shortened week ended December 28. Wheat and corn were lower while other grains were about unchanged.

Winter wheat generally declined 1¢ per bushel during the week with a light demand for limited offerings. Increased offerings are expected after the first of the year. Spring wheat dropped 2¢ despite light receipts. The market tone was easy with little trading and general lack of buying interest. Durum wheat held to the firm side with prices unchanged to 2¢ higher. White wheat drifted lower under a slack export trade. Rye markets strengthened with prices 2¢ higher at Minneapolis due mainly to extremely light offerings.

Corn prices closed 1¢ lower at most markets. Demand was generally good for rather liberal offerings. Export buying was fair. Much of the corn marketed was high in moisture. Oats dropped 1¢ at Minneapolis but ruled steady at other points. Barley and grain sorghums continued at last week's level with trading light.

Soybean prices fluctuated within a narrow range and closed generally unchanged for the period. Heavy impoundings under the loan program by farmers was a strengthening factor but this was offset by small export business. Flaxseed held steady at Minneapolis.

Feed grains - payment-in-kind export bids.....	8

CORN SALES ... against Certificate Pool continue heavy with nearly 33 million sold during the week ended December 22. This brings the total sales of corn since October 1 to nearly 241 million bushels. Of the total sales, 209 million were classified as storable while 32 million were non-storable. Around 2.2 million cwt. of grain sorghums were sold during the week ended December 22 bringing the total since October 1 to 45.7 million cwt. Nearly 3.7 million bushels of barley have been sold under this program - most of which was sold in July and August.

SOYBEAN QUALITY ... of the record 1961 crop is as good or slightly better than recent years on the basis of inspected receipts during October and November. Of the inspected receipts during these months, 75 percent graded No. 2 or better compared with 72 percent last year and 66 percent for the 5-year average for these months. A smaller portion of the November receipts graded No. 1 than in October but the percentage was slightly above November 1960. Despite the record crop, inspected receipts during November dropped below November a year ago while the October receipts were about the same each year.

Sales of Commodity Credit Corporation-owned grain represent certificates issued to producers under the 1961 Feed Grain Program. Sales of grain sorghums began in July, barley and corn in September, and oats in November.

^{1/} Portland grain sorghums adjusted due to contract cancellation.

Cash grain closing prices compared with support price at principal terminals ^{1/}
All prices rounded to nearest cent per bushel except grain sorghums per cwt.

^{1/} Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

^{2/} Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

^{3/} Applies only to the varieties Baart/Burt and Bluestem of the sub-class Hard White.

^{4/} The monthly average price is the simple average of the daily closing prices.

1/ Carlot receipts have been converted to bushels on the basis that 1 carlot equals 1,800 bushels.

2/ Of the November receipts, 400 bushels were Mixed, 5,200 Black and the remainder Yellow soybeans. Inspections of soybeans in November included 14,137,000 bushels as cargo lots, 10,333,410 bushels as truck receipts, and the balance as carlot receipts. Based on reports of inspections by licensed grain inspectors at all markets.

Soybean prices compared with market value of soybean oil and soybean meal
